Vented Decorative gas appliance: not a source of heat; not for use with solid fuel.

**WARNING**: If the information in these instructions is not followed exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

- **WHAT TO DO IF YOU SMELL GAS**
  - Do not try to light any appliance.
  - Do not touch any electrical switch; do not use any phone in your building.
  - Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
  - If you cannot reach your gas supplier, call the fire department.

- Installation and service must be performed by a qualified installer, service agency or the gas supplier.

This appliance may be installed in an aftermarket, permanently located, manufactured home (USA only) or mobile home, where not prohibited by local codes.

This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases, unless a certified kit is used.

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and must be installed.

**AVERTISSEMENT**: Assurez-vous de bien suivre les instructions données dans cette notice pour réduire au minimum le risque d’incendie ou d’explosion ou pour éviter tout dommage matériel, toute blessure ou la mort.

- Ne pas entreposer ni utiliser d’essence ni d’autres vapeurs ou liquids inflammables dans le voisinage de cet appareil ou de tout autre appareil.

- **QUE FAIRE SI VOUS SENTEZ UNE ODEUR DE GAZ**:
  - Ne pas tenter d’allumer d’appareil.
  - Ne touchez à aucun interrupteur. Ne pas vous servir des téléphones se trouvant dans le bâtiment où vous trouvez.
  - Appelez immédiatement votre fournisseur de gaz depuis un voisin. Suivez les instructions du fournisseur.
  - Si vous ne pouvez rejoindre le fournisseur de gaz, appelez le service des incendies.

- L’installation et l’entretien doivent être assurés par un installateur ou un service d’entretien qualifié ou par le fournisseur de gaz.

Cet appareil peut être installé dans une maison préfabriquée (É.-U. seulement) ou mobile déjà installée à demeure si les règlements locaux le permettent. Cet appareil doit être utilisé uniquement avec les types de gaz indiqués sur la plaque signalétique. Une trousse de conversion est fournie avec cet appareil.

Une barrière conçue pour réduire le risque de brûlures du verre chaud est fournie avec cet appareil et doit être installée.
1 READ ME FIRST

1.1 CAUTION STATEMENTS TO PARENTS OF YOUNG CHILDREN

Do not place young children in cribs, bassinets or the like in the vicinity of this appliance. Young children may be vulnerable to high temperatures that this fireplace can create locally.

Young children should be carefully supervised and never left unattended when they are in the same room as the fireplace. Toddlers, young children and others may be susceptible to accidental contact burns. A physical barrier is recommended if there are at risk individuals in the house. To restrict access to a fireplace or stove, install an adjustable safety gate to keep toddlers, young children and other at-risk individuals out of the room and away from hot surfaces. This physical barrier is in addition to the required glass barrier Screen.

1.2 INITIAL FIRING AND CURING PROCEDURE

This product requires an initial heat curing cycle during which some materials used in the manufacturing process will burn off and the powder paint goes through a hardening cycle. During the initial curing phase, some smoke and odor will be emitted. This is normal.

The installer should perform these initial curing cycle procedures as the final step in the installation process before finishing materials are installed around this fireplace. See chapter 3.1.1 Mendota Fireplace Curing Instructions. Read and follow all instructions given in this Chapter and perform the 3-step curing cycle. After the 3-step curing cycle has been completed, all smoking will have stopped. Some slight odors may remain. With subsequent use of this Fireplace, odors will slowly dissipate and disappear.

**ODOR RISKS**

If this appliance is not operated for an extended period (three months or longer), when first fired again, expect odors of burnt dust and lint; just like when turning on your home heating system for the first time in the Fall.

1.3 HOT SURFACES ARE NORMAL

Be aware that the surface in front of, above and adjacent to this heater appliance can be too hot to touch. As long as all required clearances to combustibles are met and the required finishing materials are used, this appliance will perform safely. Note that the exposed surfaces immediately surrounding the Fireplace can have surface temperatures that are too hot to touch. This level of surface temperature is considered normal and does not indicate any hazardous situation.

**WARNING:** The supplied barrier screen must be installed, always, when this fireplace is in operation. Do not place any object directly in front (within 60”) or directly above (on the front edge of the mantel). This is a heating appliance. Areas directly in front and above this appliance will be very hot and can damage most household objects if placed too close. Keep Furniture pieces at least 60” away in front of the barrier screen.

1.4 PERIODIC AND ANNUAL CLEANING ARE REQUIRED

See Required Periodic Inspections, Chapter 6.1 and Required Annual Maintenance, Chapter 6.3. Periodic and Annual cleaning and general services are required at least once a year in the Summer or early Fall. Changing remote control batteries at least every 6 months is required; or more frequently based upon usage frequency. Cleaning pilot flame sensor rod, sparker rod and pilot hood body is required at least once per year. Cleaning of burner ports, gas orifice areas is required once a year due to insects’ nesting probability due to Mercaptan addition in Natural Gas (Mercaptan has been known to attracts insects).

2 GENERAL INFORMATION

2.1 SAFETY AND WARNING INFORMATION

2.1.1 Building Permit & Inspection Requirements

All installations of Mendota Fireplaces must comply with all the requirements stated in this Installation and Operating Manual. The dealer and/or installer must obtain all required building permits and inspection approvals from the local building inspection department or the local jurisdiction. To validate warranty coverage, Mendota may require facsimile copies of the building permit and inspection approval forms. Failure to provide adequate proof that the installation conforms to all local requirements and the requirements stated in the Installation and User Manual will void all applicable warranties.

2.1.2 Other Cautions

**CAUTION**: Each installation must conform to all local, state and national codes. Refer to the national fuel gas code and local zoning and code authorities for details on installation requirements. The Mendota Fireplace must be vented to the outside in accordance with the latest edition of the National Fuel Gas Code. In the absence of local codes, the installation must conform to the most current edition of the National Fuel Gas Code ANSI Z223.1, also known as NFPA 54.

**CAUTION**: The Mendota Fireplace may be installed in a manufactured (mobile) home after the first sale of the home. Manufactured home (mobile home) installation must conform with the Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280, or, when such a standard is not applicable, the Standard for Manufactured Home Installations, ANSI A225.1/NFPA 501A, or CSA Z240.4-Gas Equipped Mobile Housing. Consult your local building official.

**INSTALLER**: Leave this manual with the appliance. **CONSUMER**: Retain this manual for future reference.

**INSTALLATEUR**: Laissez cette notice avec l’appareil. **CONSOMMATEUR**: Conservez cette notice pour consultation ultérieure.
2.2 SAFETY WARNINGS

WARNING

This product and the fuels used to operate this product (liquid propane or natural gas), and the products of combustion of such fuels, can expose you to chemicals including benzene, which is known to the State of California to cause cancer and reproductive harm. For more information, go to: www.P65Warnings.ca.gov

HIGH-ALTITUDE INSTALLATION INFORMATION: Prior to installing at altitudes higher than 7,500 ft., understand the need for gas input derating. Contact Mendota Technical Service for support.

INSTALLER NOTE: These instructions are to remain with homeowner.

Be sure to read and understand all instructions carefully before starting the fireplace. Failure to follow these instructions may result in a possible fire hazard leading to property loss, injury or even death and will void all warranty.

FOR YOUR SAFETY: A qualified installer, service agency, or the gas supplier must perform installation and service. Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

WARNING: Do not operate this appliance with the glass removed, cracked or broken. A licensed or qualified person should do replacement of glass.

AVERTISSEMENT: Ne pas utiliser l’appareil si le panneau frontal en verre n’est pas en place, est craqué ou brisé. Confiez le remplacement du panneau à un technicien agréé.

WARNING: Mendota gas fireplaces are heat producing appliances. Do not burn wood, paper or other materials in this fireplace. This fireplace is designed as a supplemental heat source. It is advisable to have an alternative primary heat supply.

In the Commonwealth of Massachusetts:
Installation must be performed by a licensed plumber or gas fitter; a CO detector shall be installed in the room where the appliance is installed.

WARNING: Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to this manual. For assistance or additional information consult a qualified installer, service agency or the gas supplier.

This appliance may be installed in an aftermarket, permanently located, manufactured (mobile) home (USA Only), where not prohibited by local codes. This appliance is only for use with the type(s) of gas indicated on the rating plate. This appliance is not convertible for use with other gases, unless a certified conversion kit is used.

Cet appareil peut être installé dans un maison préfabriquée (mobile) déjà installée à demeure si les règlements locaux le permettent. Cet appareil doit être utilisé uniquement avec les types de gaz indiqués sur la plaque signalétique. Ne pas l’utiliser avec d’autres gaz sauf si un kit de conversion certifié est installé.
2.2.1 Safety Standards and Warnings

Do not operate this appliance with the glass removed, cracked or broken. Only glass doors certified with this appliance shall be used.

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and must be installed. If the barrier becomes damaged, the barrier shall be replaced with the manufacturer’s barrier for this appliance.

Any Barrier Screen or guard removed for servicing must be replaced before operating fireplace.

This unit is not for use with solid fuel.

Installation and repair should be performed by a qualified service person. The fireplace and venting system should be inspected before initial use and at least annually by a professional service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding, material, etc. It is imperative that the unit’s control compartment, burners and circulating air passageways are kept clean to provide for adequate combustion and ventilation air.

L’installation et la réparation devrait être confiées à un technicien qualifié. L’appareil devrait faire l’objet d’une inspection par un technicien professionnel avant d’être utilisé et au moins une fois l’an par la suite. Des nettoyages plus fréquents peuvent être nécessaires si les tapis, la literie, et cetera produisent une quantité importante de poussière. Il est essentiel que les compartiments abritant les commandes, les brûleurs et les conduits de circulation d’air de l’appareil soient tenus propres.

Always keep the fireplace clear and free from combustible materials, gasoline, and other flammable vapors and liquids.

Never obstruct the flow of combustion and ventilation air. Keep the front of the fireplace clear of all obstacles and materials for servicing and proper operation. Use only Mendota approved Screens, Fronts and Trim Kits.

Due to high temperature, the fireplace should be located out of traffic areas and away from furniture and draperies. En raison des températures élevées, l’appareil devrait être installé dans un endroit où il y a peu de circulation et loin du mobilier et des tentures.

Clothing or flammable material should not be placed on or near the fireplace.

On ne devrait pas placer de vêtements ni d’autres matières inflammables sur l’appareil ni à proximité.

Children and adults should be alerted to the hazards of high surface temperature and should stay away to avoid burns or clothing ignition. The door glass, surrounding walls and objects can be too hot to touch.

Les enfants et les adultes devraient être informés des dangers que posent les températures de surface élevées et se tenir à distance afin d’éviter des brûlures ou que leurs vêtements ne s’enflamment.

Young children should be carefully supervised when they are in the same room as the fireplace. Toddlers, young children and others may be susceptible to accidental contact burns. A physical barrier is recommended if there are at risk individuals in the house. To restrict access to a fireplace or stove, install an adjustable safety gate to keep toddlers, young children and other at-risk individuals out of the room and away from hot surfaces. This physical barrier is in addition to the required glass barrier Screen.

Les jeunes enfants devraient être surveillés étroitement lorsqu’ils se trouvent dans la même pièce que l’appareil. Les tout petits, les jeunes enfants ou les adultes peuvent subir des brûlures s’ils viennent en contact avec la surface chaude. Il est recommandé d’installer une barrière physique si des personnes à risques habitent la maison. Pour empêcher l’accès à un foyer ou à un poêle, installez une barrière de sécurité; cette mesure empêchera les tout petits, les jeunes enfants et toute autre personne à risque d’avoir accès à la pièce et aux surfaces chaudes.

These units must use one of the vent systems described in the Flue Venting section of this manual.
This gas fireplace and vent system must be vented directly to the outside and must never be attached to a chimney serving a separate solid fuel-burning fireplace. Each gas fireplace must use a separate vent system. Common vent systems are prohibited.

The vent system for this fireplace must be periodically examined by a qualified service agency to maintain venting performance and safety. If the vent-air intake system is disassembled for any reason, reinstall per the instructions provided for the initial installation.

Inspect the external vent cap on regular basis (monthly) to make sure that no debris is interfering with the airflow. The flow of combustion and ventilation air are not to be obstructed.

Do not abuse the glass door assembly by striking the glass, slamming the door shut, etc.

Use only authorized parts and materials obtained from Mendota Hearth when replacing defective or damaged glass, log sets, media, firebox inner liners or trim kits.

Do not use abrasive cleaners on the glass door assembly. Do not attempt to clean the glass door when it is hot. Use Mendota recommended cleaner, KelKem.

Turn off the gas before servicing this fireplace. It is recommended that a qualified service technician perform a fireplace check-up at the beginning of each heating season.

Do not place furniture or any other combustible household objects within 60" of the fireplace front, per fire safety code.

This vented decorative gas fireplace is not for use with air filters.

Foyer au gaz à évacuation. - Ne pas utiliser avec du combustible solide.

Keep burner and control compartment clean. See installation and operating instructions accompanying fireplace.

S'assurer que le brûleur et le compartiment des commandes sont propres. Voir les instructions d'installation et d'utilisation qui accompagnent l'appareil.

WARNING: Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to the owner’s information manual provided with this fireplace. For assistance or additional information consult a qualified installer, service agency or the gas supplier.

L'AVERTISSEMENT: L'installation inconvenante, ajustement, modification, service ou entretien peut causer le dommages de propriété ou blessure. Référer au manuel d'information de propriétaire fourni cet appareil. Pour l’assistance ou information supplémentaire consulte un qualifié installeur, agence de service ou le fournisseur de gaz.

Do not use this fireplace if any part has been under water. Immediately call a qualified service technician to inspect the fireplace and to replace any part of the control system and any gas control, which has been underwater.

Ne pas utiliser cet appareil s’il a été plongé, même partiellement, dans l’eau. Appeler un technicien qualifié pour inspecter l’appareil et remplacer toute partie du système de commande et toute commande qui a été plongée dans l’eau.

Do not use any fronts or doors with this fireplace unless they are certified by Mendota and installed by a certified installer.

Seules des portes certifiées pour cet appareil doivent être utilisées.
2.3 REQUIREMENTS FOR THE COMMONWEALTH OF MASS.

The information in this section applies to all installations performed in the Common Wealth of Massachusetts only.

a. For all side wall, horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes and where the side wall exhaust vent termination is less than seven (7) feet above grade, the following requirements shall be satisfied:

1. If there is no carbon monoxide detector with an alarm already installed in compliance with the most current edition of NFPA 720, NFPA 70 and the Massachusetts State Building code in the residential unit served by the side wall horizontally vented gas fueled equipment, a battery-operated carbon monoxide detector with an alarm shall be installed in compliance with the most current edition of NFPA 720. NFPA 70 and the Massachusetts State Building Code.

2. In addition to the above requirements, if there is not one already present, a carbon monoxide detector with an alarm and a battery backup shall be installed and located in accordance with the installation requirements supplied with the detector on the floor level where the gas equipment is installed. The carbon monoxide detector with an alarm shall comply with 527 CMR, ANSI/UL 2034 Standards or CSA 6.19 and the most current edition of NFPA 720. In the event that the requirements of this subdivision cannot be met at the time of the completion of the installation of the equipment, the installer shall have a period of thirty (30) days to comply with this requirement; provided, however, that during said thirty (30) day period, a battery-operated carbon monoxide detector with an alarm shall be installed in compliance with the most current edition of NFPA 720, NFPA 70 and the Massachusetts State Building Code. In the event that the horizontally vented gas fueled equipment is installed in a crawl space or an attic, the carbon monoxide detector may be installed on the next adjacent habitable floor level. Such detector may be a battery-operated carbon monoxide detector with an alarm and shall be installed in compliance with the most current edition of NFPA 720, NFPA 70 and the Massachusetts State Building Code.

3. A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2)” in size, “GAS VENT DIRECTLY BELOW, KEEP CLEAR OF ALL OBSTRUCTIONS”

4. A final inspection by the state or local gas inspector of the side wall horizontally vented equipment shall not be performed until proof is provided that the state or local electrical inspector having jurisdiction has granted a permit for installation of carbon monoxide detectors and alarms as required above.

b. EXEMPTIONS: The following equipment is exempt from 248 CMR 5.08(2) (a) 1 through 4:

1. The equipment listed in Chapter 10 entitled “Equipment Not Required To Be Vented” in the most current edition of NFPA 54 as adopted by the Board; and

2. Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

c. When the manufacturer of Product Approved side wall horizontally vented gas equipment provides a venting system design or venting system components with the equipment, the instructions for installation of the equipment and the venting system shall include:

1. A complete parts list for the venting system design or venting system; and

2. Detailed instructions for the installation of the venting system design or the venting system components.

d. When the manufacturer of a Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for venting the flue gases, but identifies “special venting systems”, the following shall be satisfied:

1. The referenced “special venting system” instructions shall be included with the appliance or equipment installation instructions; and

2. The “special venting systems” shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

e. A copy of all installation instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation
3 TECHNICAL REFERENCES

Read and understand all information provided under this section, Technical References, before you begin the installation of this product. Failure to follow all technical reference information, use of components or parts not approved or use of improper installation procedures can lead to a fire or explosion causing property damage, personal injury or loss of life.

3.1 GENERAL TECHNICAL REFERENCES

**Caution:** Before igniting the pilot or burners, perform the following inspections and verifications:

- Check glass gasket seal. Visually inspect glass gasket, especially at the corners of the glass piece. Glass gasket is installed as a 4-piece assembly. Check joints between the gasket pieces at the corners. They should butt against each other to create a seal. Gaps between gasket pieces can cause exhaust leaks and lead to acrid smell concerns. Check for gas leaks at all fittings.
- During the first burning cycle of this Fireplace, ensure the convection blower is running at level three during the first two hours of initial burn. After two hours of initial burn, allow fireplace to cool. Proceed with Mendota Fireplace Curing Instructions, Chapter 3.1.1.

**WARNING**

**FIRE RISK/ODOR RISK**

- This fireplace must be installed on top of wood, masonry or metal floor extending the full width and depth of this fireplace.
- Verify glass gasket seal before firing unit the first time. Verify proper latching of glass frame onto unit body.
- Understand that this appliance requires a break-in period during which small amounts of smoke and curing smells will be emitted.

This fireplace must be installed and serviced by a qualified installer, service agency, or the gas supplier. Any adjustments to burner, pilot, logs or coal bed must be made by a qualified installer, service agency, or the gas supplier.

Never block off convection air openings or paths. Trim panels or surrounds shall not seal ventilation openings in the fireplace. Always use Mendota decorative fronts and Mendota approved vent systems and vent caps only.
3.1.1 Mendota Fireplace Curing Instructions

### ATTENTION

It is important that the blowers are turned on during this step to prevent the curing smoke from staining the wall finish above the fireplace. Mendota recommends completing Step 1 prior to installation of wall finish materials.

Visible smoke and strong odor are to be expected during this step. If desired, disable smoke alarms before this step, smoke from the initial curing cycle will set off smoke alarms. Open doors and windows of the home to circulate fresh air.

#### 3.1.1.1 Step 1: Expelling Initial Smoke and Odors
- Please refer to 5.8 Operating Instructions if you have questions on how to operate your Mendota.
- Complete the installation of any barrier screen (required), surround, front or doors.
- Turn the fireplace on in the Manual (Off) thermostat mode.
- Set the Flame Height to Hi.
- Set the Fan Speed Control to Level 3.
- Run the fireplace with these settings for a minimum of 2 hours.
- Turn the fireplace off and let it cool.

#### 3.1.1.2 Step 2: High Heat Curing Cycle
- Turn the fireplace on in the Manual (Off) thermostat mode.
- Set the Flame Height to Hi.
- Set the Fan Speed Control to Off.
- Run the fireplace with these settings until curing odors have diminished.
- When odors have diminished leave the fireplace turned on and continue to Step 3.

#### 3.1.1.3 Step 3: Final Curing Cycle
- With the fireplace still turned on from Step 2.
- Set the Fan Speed Control to the lowest setting Level 1.
- If any new curing odors are detected, continue to run the fireplace with this setting until the curing odors have diminished.

**ATTENTION:** Slight odors may still be noticeable on future startups of the fireplace. These will diminish over time as the fireplace is used.

#### 3.1.1.4 Additional Curing Information
It is not unusual for a fireplace to require more than 10 continuous hours on high for curing odors to diminish. There are variables that can extend or shorten the curing time such as decorative fronts, doors, facing materials and their application.

Finish materials around the fireplace are subject to high temperatures. Finishing materials used over the fireplace in the non-combustible zone can see temperatures around 350° F. Materials used around the fireplace must be rated for these temperatures. Failure to use adequate materials can result in odor problems. Please refer to Chapter 3.2.1 of this manual for information on appropriate finishing materials.

Please be aware that materials used around the fireplace will heat up and have the potential to cause odor issues. Adhesives, glue, wall substrate, wall finish material, paints and polishes are common materials that if used incorrectly will cause odor issues. Mendota is not responsible for any odor issues caused by materials used around the fireplace.
3.2 MECHANICAL TECHNICAL REFERENCES

3.2.1 Planning the installation
This Mendota Fireplace must be installed and serviced by a qualified installer, service agency, or the gas supplier. When planning on appliance installation, it is necessary to determine the following information before installing:

- Where the appliance is to be installed.
- The vent system configuration to be used.
- Gas supply piping.
- Electrical Wiring.
- Framing and finishing details.
- Hearth Protection Pad Requirements.
- Whether accessories such as a ceiling fan are desired.

3.2.2 Selecting Appliance Location
When selecting a location for your appliance, it is important to consider the required clearances to walls.

**WARNING**
FIRE RISK - ODOR RISK

- Install appliance on hard metal or wood surfaces extending full width and depth of this fireplace.
- Do NOT install this fireplace directly on carpeting, vinyl or any combustible material other than wood. Construct chase to all clearance specifications in manual.
- Locate and install appliance to all clearance specifications in manual.

Figure 3-1 FIREPLACE LOCATION

MINIMUM FRAMING WIDTH = 80"
MINIMUM FRAMING DEPTH = 22"
3.2.3 Listing Label

The listing label is located under the firebox. Remove the center access grill and locate the listing plate. It is chained to the firebox’s leg.

![Listing Label]

**WARNING:** IMPROPER INSTALLATION, ADJUSTMENT, ALTERATION, SERVICE OR MAINTENANCE CAN CAUSE PROPERTY DAMAGE, PERSONAL INJURY, OR LOSS OF LIFE. REFER TO THE OWNER’S INFORMATION MANUAL PROVIDED WITH THIS APPLIANCE. INSTALLATION AND SERVICE MUST BE PERFORMED BY A QUALIFIED INSTALLER. THIS VENTED DECORATIVE GAS APPLIANCE IS NOT FOR USE WITH AIR FILTERS. REGISTRER KIT MAY BE USED FOR USE ONLY WITH GLASS BARRIER Part no. AA-1122307

**WARNING:** NE PAS UTILISER L’APPAREIL SI LE PANNEAUFRONTAL EN VERRE N’EST PAS EN PLACE, EST CROQUÉ OU BRISÉ. CONFIEZ LE REMPLACEMENT DU PANNEAU À UN TECHNICIEN AGREE. SEULES DES PORTES CERTIFIEES POUR CET APPAREIL DOIVENT ETRE UTILISEES.

**DANGER**

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at-risk individuals.

3.2.4 Other Warning and Caution Labels

A few warnings or caution labels are attached to this appliance body as required per code to inform you of important facts. You can find these labels on the right side outer surface of this appliance.

Make certain you heed all the warning and caution statements during installation and maintenance of this appliance.

Figure 3-3

WARNING:
Failure to install this appliance per the manufacturer's instructions or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

Figure 3-4

WARNING
HOT GLASS WILL
CAUSE BURNS.
DO NOT TOUCH GLASS
UNTIL COOLED.
NEVER ALLOW CHILDREN
TO TOUCH GLASS.

Figure 3-5

CAUTION:
HOT WHILE IN OPERATION. DO NOT TOUCH.
SEVERE BURNS MAY RESULT.
KEEP CHILDREN, CLOTHING, FURNITURE, GASOLINE, AND OTHER LIQUIDS WITH FLAMMABLE VAPORS AWAY!

ATTENTION:
L'APPAREIL EST CHAUD LORSQU'IL FONCTIONNE.
NE PAS TOUCHER L'APPAREIL.
SURVEILLER LES ENFANTS. GARDER LES VÊTEMENTS, LES MEUBLES, L'ESSENCE OU AUTRES LIQUIDES À VAPEUR INFLAMMABLES LOIN DE L'APPAREIL.

Figure 3-6

This appliance must be installed in accordance with local codes, if any, if not; follow the National Fuel Gas Code, ANSI Z223.1 or Canadian Installation Codes, CAN/CGA B149. «Install l'appareil selon les codes ou règlements locaux, ou, en l'absence de tels règlements, selon les Codes d'installation CAN/CGA-B149

Figure 3-7

Figure 3-8

NOTICE
Initial heater start-up will cause some NON-TOXIC "off gassing" of adhesives, gasket binders, paint and other materials.

Initial chauffe démarrage cause certains NON TOXIQUES "off gasso" des colle, joint de liants, de la peinture et autres matériaux.

Most nuisance odors will be eliminated after the first two hours of operation. However, slight amounts may be present during the first 24 hours of initial operation.

La plupart des nuisances d'odeur seront éliminés après les deux premières heures de fonctionnement. Toutefois, de légères quantités mai être présent pendant les 24 premières heures de l'opération initiale.

Figure 3-9

This appliance must be properly connected to a venting system in accordance with the manufacturer's installation instructions.

SURVEILLER LES ENFANTS. GARDER LES VÊTEMENTS, LES MEUBLES, L’ESSENCE OU AUTRES LIQUIDES À VAPEUR INFLAMMABLES LOIN DE L’APPAREIL.

Keep burner and control compartment clean. See Installation and Operating Instructions accompanying the appliance.

S'assurer que le brûleur et le compartiment des commandes sont propres. Voir les instructions d'installation et d'utilisation qui accompagnent l'appareil.

**WARNING:**

Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to the owner’s information manual provided with this appliance. For assistance or additional information consult a qualified installer, service agency or the gas supplier.

**AVERTISSEMENT :**

L'installation inexacte, l'ajustement, le changement, le service ou l'entretien peuvent causer des dommages ou des dégâts matériels. Référez-vous au manuel de l'information du propriétaire équipé de cet appareil. Pour l'aide ou l'information additionnelle consultez un installateur qualifié, l'agence de service ou le fournisseur de gaz.
3.2.5 ML72 Fireplace Ratings Information

This Mendota Fireplace can be installed directly on top of a metal, masonry or wood structural surface.

**ELECTRICAL REQUIREMENTS:** 120 Volts AC, 3.5 Amps (minimum line voltage allowed 110 Volts AC) REQUIRED

**GAS SUPPLY PRESSURE:**
- NAT. GAS: 7" W.C. [5.0" W.C. MIN., 11" W.C. MAX.]

**LP GAS CONVERSION KIT:** This Fireplace comes configured for use with Natural Gas. To convert the Fireplace for use with LP Gas, install: LP GAS CONVERSION KIT #HA-112-00027.

**GAS INPUT RATES**
- High Fire
  - NAT. GAS: 48,500 BTUH
  - L.P. GAS: 48,500 BTUH
- Low Fire
  - NAT. GAS: 35,000 BTUH
  - L.P. GAS: 39,900 BTUH

**ORIFICE SIZES**
- [0-2000ft (610 m)]: #25 NG [#45 L.P.]
  - [2000-4500ft (610-1370 m)]: #25 NG [#45 L.P.]

**P.4 FIREPLACE EFFICIENCY**

**FLUE VENTING:** COAXIAL RIGID- 5” DIAMETER EXHAUST & 8” DIAMETER AIR INLET AND APPROVED POWER VENT

All UL Listed Coaxial Rigid 5”X8” Vent pipe components are approved for use. Do not mix components of different brands or series. Always use the same brand and series components throughout the entire vent system.

**NET WEIGHT**

350 lbs. (Team Lift recommended)

**BARRIER SCREEN:** A barrier screen that has been certified for use with this Fireplace must be installed on the Fireplace when it is in use. The barrier screen will prevent accidental contact with the glass door face, which could result in a severe burn.

**SAFETY:** AGA certified, electronic ignition IPI system activated with thermostatic remote control.

**CERTIFIED TO:** ANSI Z21.50

This Mendota Gas Fireplace has been tested and certified by:
Intertek Testing Services, 8431 Murphy Drive, Middleton, WI 53562
ICBO#AA647-4
3.2.6 Normal Surface Temperatures

**WARNING:** The supplied barrier screen must be installed always when this fireplace is in operation. Do not place any object directly in front (within 60” from barrier screen surface) or directly above (on the front edge of the mantel). This is a heating appliance. Areas directly in front and above this appliance will be very hot and can damage most household objects if placed too close. Keep Furniture pieces at least 60” away in front of the barrier screen surface.

**HINT:** To greatly reduce surface temperatures surrounding this Fireplace during operation, Mendota recommends operating the integrated convection air blowers which aid in cooling all surrounding surfaces.

Mendota Fireplaces comply with ANSI Z21.50-2017 Standards for maximum surface temperatures on exposed “combustible” surfaces adjacent to the Fireplace.

Be aware that surfaces in front of, above and adjacent to this appliance can be too hot to touch. As long as all required clearances to combustibles are met and the required finishing materials are used, this appliance will perform safely. Note that the exposed surfaces immediately surrounding the Fireplace can have surface temperatures that are too hot to touch. This level of surface temperature is considered normal and does not indicate any hazardous situation.

3.2.6.1 Surround Face Temperatures

Areas of the breastplate directly above the top convection air gap of this Fireplace can be very hot (too hot to touch) and is deemed normal.

3.2.6.2 Mantel Temperatures

Mendota Fireplaces comply with ANSI Z21.50-2017 standards for maximum surface temperatures on exposed “combustible” surfaces adjacent to the Fireplace. Be aware that surface in front of, above and adjacent to this appliance can be too hot to touch. As long as all required clearances to combustibles are met and the required finishing materials are used, this appliance will perform safely. Note that the exposed surfaces immediately surrounding the Fireplace can have a surface temperature too hot to touch. This level of surface temperatures is considered normal and does not indicate any hazardous situation.

**WARNING:** Surfaces surrounding this Fireplace can be very hot to the touch during operation. Carefully supervise children and pets while this Fireplace is operating.
3.2.7 **Fireplace Dimensions and Clearances**

**WARNING: VENT IS NOT CENTERED ON THE UNIT!**

![Diagram of Fireplace Dimensions and Clearances]

**Figure 3-13 Overall Fireplace Dimensions**

Caution: The distance from floor level to the centerline of the vent cap is based on Simpson DuraVent GS components. If using vent components of another brand, do not assume that the measurement given here is applicable. Verify the distance to the centerline of vent cap by measuring the components you are using.

3.2.8 Fireplace Features Identification

See Figure 3-14 FIREPLACE DIMENSIONS AND FEATURES below. Identify the features included with this Fireplace and their locations.

WARNING: VENT IS NOT CENTERED ON THE UNIT!

Figure 3-14 FIREPLACE DIMENSIONS AND FEATURES
3.2.8.1 Convection Blower System
Dual blowers are provided as standard equipment with this Fireplace. The dual blowers have an air output rating of 190 CFM (in free air). This Fireplace is designed to operate with the blowers turned off or on. Turning the blower on aids in distributing and circulating heat to the room this Fireplace is installed in.

3.2.8.2 Top Standoffs
The top standoffs on the fireplace come folded down.
To install the top standoffs:
- Fold the standoff up.
- Locate and remove the two screws that are on the top of the fireplace.
- Fold the standoff in half and line up the holes on the standoff flange with the holes on the top of the fireplace.
- Use the screws that were removed from the holes to screw the standoff to the top of the fireplace.

3.2.8.3 Lifting Handles
Two lifting handles, one on each side are provided. The lifting handles make it possible to lift the unit onto a cart for transport.

WARNING: The lifting handles are designed only for lifting and moving the fireplace short distances. Such as lifting the fireplace onto a transport cart or shifting the fireplace during installation. Do not attempt to carry this fireplace by the lifting handles only.

Note: Team lifting is recommended.
To use the lifting handles, slide hands into the opening of the lifting handle, grip top U-shaped section tightly and lift.
Once this Fireplace is moved to its final location, you may remove and discard the lifting handles, if necessary, to reduce the width of this Fireplace.
Rough Framing Dimensions
The rough framing dimensions given are the minimum allowed framing dimensions. Be sure when planning the framing of the unit that there is adequate space to hook up the gas and electrical on the right side of the unit.

**SPECIAL FRAMING NOTE:**
If the fireplace is to be recessed in a cavity deeper than 22", all framing and finishing materials protruding past the front face of this fireplace must be of the NON-COMBUSTIBLE variety.

**WARNING: VENT IS NOT CENTERED ON THE UNIT**

*Figure 3-15 FRAMING DIMENSIONS*
3.2.8.4 Constructing the Appliance Chase

A chase is a vertical box-like structure built to enclose this fireplace and its vent system. Vertical vents that run on the outside of a building may be, but are not required to be, installed inside a chase.

Construction of the chase may vary with the type of building. These instructions are not substitutes for the requirements of local building codes. Local building codes MUST be adhered to.

Chases should be constructed in the manner of all outside walls of the home to prevent cold air drafting problems. The chase should not break the outside building envelope in any manner.

Wall, ceiling, base plate and cantilever floor of the chase should be insulated. Vapor and air infiltration barriers should be installed in the chase as per regional codes for the rest of the home. Additionally, in regions where cold air infiltration may be an issue, the inside surfaces of the chase may be sheet rocked and taped for maximum air tightness.

To further prevent drafts, the fire stops should be caulked with high temperature caulk to seal the gaps. Gas line holes and other openings should be caulked with high temp caulk or stuffed with unfaced insulation. If the appliance is being installed on a cement slab, a layer of plywood may be placed underneath this fireplace to prevent conducting cold up into the room.

WARNING: VENT IS NOT CENTERED ON THE UNIT!

Figure 3-16 Floor to Wall Thimble Center Dimension
3.2.9 Clearance from Appliance Side Walls

Figure 3-17 CLEARANCE TO BODY
3.2.10 Clearances to Combustible Side Walls

The minimum distance required from the inner guide side edge to a combustible side wall is 16”. Combustible side walls, mantel corbels, mantel legs and other combustible walls and decorative objects must fall behind a 45-degree line extending outward from the inner guide side edge unless such objects are more than 16” away from the inner guide side edge.

**WARNING: VENT IS NOT CENTERED ON THE UNIT!**

If the required clearance cannot be met to a pre-existing combustible side wall, an NFPA approved clearance reduction shield, metal or ceramic board, must be added to the side wall.

3.2.10.1 Horizontal Clearance Reduction by 66%

**NPFA 211 Approved:** Install 20-gauge or heavier steel shield that provides at least a 1” active airspace, on the combustible wall surface. To provide for active airflow, install at least 1” metal or ceramic standoffs or spacers between the metal shield and the combustible surface being protected. The bottom and top edges of the cavity between the metal shield and the combustible surface must be left open. The steel shield must be a minimum of 12” larger in each direction than the surface area of the source of heat; or if the surface being protected is smaller than surface area of the source of heat, this shield must be larger than the combustible surface in each direction.

By using this method of protection, if the required horizontal clearance was 16”, the resulting clearance will be reduced by 66% to 5-3/8” between the heat source and the metal shield.

3.2.10.2 Horizontal Clearance Reduction by 50%

**NPFA 211 Approved:** Install an R-1 rated ceramic board or R-1 rated mineral board on the wall you are attempting to protect.

By using this method of protection, if the required horizontal clearance was 16”, the resulting clearance will be reduced by 50% to 8” between the heat source and the R-1 Rated wall board.
3.2.11 Clearances to Combustible Mantels

An 8” combustible mantel may be installed at a minimum of 55” above the floor level of this Fireplace. Non-combustible (marble, brick, stone, metal etc.) mantels can be installed at any desired height above the top convection air opening. Any pre-existing combustible mantel must fall within the approved mantel profile chart.

**WARNING:** Make proper use of this chart. Do not compromise the specifications contained in this chart. Failure to adhere to proper clearances required to combustibles may cause spontaneous combustion of the mantel and may result in a fire causing property damage, personal injury or loss of life.

**NOTE:** For mantels that protrude more than 8 inches from the front surface of the fireplace use a rise and run of (1:1) to calculate the required height to the mantel.

**EXAMPLE:** You have a 12” mantel. To calculate the height above the floor of the fireplace the equation would be: (Depth of Mantel) – 8” + 55” = (Height above the floor of the fireplace)

12” – 8” + 55” = 59”

DO NOT deviate from this minimum clearance requirement. Doing so can lead to a severe fire hazard.
3.2.1 Suitable Mantel, Facing & Hearth Pad Materials

Materials used in areas designated as non-combustible must be rated as non-combustible per NFPA 220 Standard on Types of Building Construction, or reported as passing ASTM E 136, Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750 Degrees C.

**WARNING: Common Finishing Materials Not Approved for use.**

Paper faced gypsum board (drywall) including Type X Fire Rated board is not a non-combustible material. These boards are not approved for use in the non-combustible zone of the fireplace.

WonderBoard brand boards are commonly used as a backerboard for tile. WonderBoard backerboard is not a non-combustible material and is not approved for use in the non-combustible zone of the fireplace. In addition, WonderBoard off-gasses when heated and should not be used anywhere near the fireplace.

Information for common materials used is given below. It is recommended that finishing material used on the wall over the fireplace has a depth of at least 1”. This is the depth of the finishing guides on the fireplace and will result in the best final appearance. Mendota does not guarantee any materials used around the fireplace. Mendota disclaims any and all liability for any damage to finishing materials including warping, discoloring, cracking, peeling or flaking. This also includes any off-gassing or unpleasant smells from materials when they are heated.

<td></td>
</tr>
</tbody>
</table>

Common non-combustible materials used around a fireplace. Can be used on the wall or hearth pad. Install these materials per the recommendations in the following sections.
3.2.1.2 Smooth Wall

When creating a smooth wall finish around the fireplace the correct materials and installation method must be followed to minimize the risk of cracks forming on the wall. Promat Promafour and SkamoEnclosure Board are two of the best options when creating a smooth wall finish. These boards have been designed to create a smooth wall finish around a fireplace. These materials can be hard to source and may not be available in all areas.

Another recommended option when creating a smooth wall look is to utilize the Cool Wall heat transfer system. The cool wall system keeps the wall above the fireplace cooler reducing the risk of the finishing material cracking. When the cool wall system is used Hardibacker 500 is recommended material to use. This material is available at most hardware stores.

**NOTE:** When using Hardibacker to create a smooth wall finish it is recommended that two sheets are used to make a 1” thick wall on the fireplace. This depth matches the finishing guides on the fireplace and results in a clean finish.

For all smooth wall installations, the wall material should not be screwed to the metal face of the fireplace. The wall material should be attached to the wood framing around the fireplace and floated over the face of the fireplace. Size and install the boards so there are no seams above the fireplace. This will reduce the risk of the wall cracking as the fireplace expands and contracts during heating and cooling.

3.2.1.3 Ceramic or Porcelain Tile

Use of ceramic or porcelain tiles as facing materials around a Mendota fireplace is approved. If selecting a mosaic tile where tiles are held together with a webbing, ensure the webbing is a non-combustible material like fiberglass. Also ensure that the tiles are not attached to the webbing with a glue or epoxy that will off gas and smell when heated.

Use caution when selecting tile adhesives. Avoid polymer-modified mortars. These mortars will off-gas and smell when heated. Use unmodified dry-set mortar or hi-temp RTV Silicone to attach ceramic glazed tiles as facing in hot areas around this fireplace. If using hi-temp RTV silicone, allow a minimum 48 hours cure time. A non-combustible backer board must be used when installing tile in a non-combustible zone around the fireplace.

3.2.1.4 Marble, Granite and Natural Stones

Marble, granite and other natural stone products are approved for use as mantel, facing and hearth pad materials with the following limitations and understanding of these cautionary statements:

**Never use a one-piece marble, granite or natural stone that is water jet or mechanically cut in a U-shape as facing material to cover the sides and top areas around this product. Doing so can lead to crack formation at the inner corners of the U shape due to thermal expansion.**

Most marble slabs and marble tiles contain a polyester resin coating while most granite slabs and granite tiles contain epoxy resin coatings. The polyester resin coatings and the epoxy resin coatings provide structural strength to the stone slabs and prevent cracking, chipping and breakage during shipping and handling. These coatings also provide a glossy or satin surface finish and help seal the stone surface.
The polyester resin used on marble slabs can discolor when exposed to temperatures greater than 150°F and will structurally fail at temperatures above 230°F. The epoxy resin coating used on granite slabs are resistant to discoloring and structural failures up to 350°F. Mendota does not assume any liability for discoloring, flaking or cracking of marble or granite.

Temperatures on facings around Mendota fireplaces can reach 350°F directly outside the top convection air gap. These temperatures will discolor polyester resin coated marble facings and can cause the polyester resin coating to fail near the top convection air gap.

Mendota cannot guarantee suitability of use of any marble slabs or tiles that have a polyester resin coating applied to it and cannot guarantee against discoloration or structural failure of marble or polished stone facings that have a polyester resin coating. Consult with your local stone supplier.

Prior to use of any marble, granite or polished stone facing material, especially white colored ones, run heat exposure tests on a sample piece. Expose sample pieces to temperatures between 275°F and 350°F for a period of eight hours. Compare the heat exposed sample to a control unheated piece and judge for color changes. Do not use if any color changes are evident.

Mendota recommends the use of honed bare marble and bare stone facing materials or honed bare granite and epoxy resin coated granite only.

Mendota cautions that due to natural structural defects that can exist within marble and stone pieces, cracking and/or flaking of the marble or stone is possible and must be considered prior to selection and application around Mendota fireplaces. Mendota further cautions that proper adhesives be used to attach stone facings. Pay attention to the potential of off gassing of chemical vapors from mastic and other adhesives. Improper selection can lead to emission of chemicals with unwanted smells.

### 3.2.1.5 Suitable Paints and Sealant Materials

#### 3.2.1.5.1 Paint Types Approved for Use

Industrial Acrylic Paints, Alkyd based Paints. When selecting paint for applications on facings, mantels, corbels or floors within 2’ in front of a fireplace raised 6” or higher, avoid off the shelf paints which may have modifier additives used to increase “hiding” ability, accelerate drying times and curing times. Consult with a reputable paints and sealants supplier and acquire industrial acrylic paints or alkyd-based paints.

#### 3.2.1.5.2 Sealants Type Approved for Use

Heat resistant polyurethane sealants which are not damaged by prolonged exposure to raised temperatures. Many are flame resistant, meaning that they resist ignition when exposed to high temperatures and can insulate the substrate and delay damage to it. When selecting polyurethane for applications on facings, mantels, corbels or floors within 3’ in front of or above a fireplace, avoid off the shelf urethane sealants which may have modifier additives used to accelerate drying times and curing times. Consult with a reputable paints and sealants supplier and acquire heat resistant polyurethane sealants.

#### 3.2.1.5.3 Wood Application Cautions

If wood used around or in front of the fireplace has been chemically cleaned or bleached prior to staining or painting, it is of the utmost importance to make certain that the cleaner or bleach does not remain in the wood substrate under the final paint or sealant applied. If any cleaner or bleach remain within the wood structure, application of heat from the fireplace, even low-level heat, will cause the cleaner or bleach compounds to expand or evaporate causing separation of the paint or sealant from the wood surface and may cause peeling or bubbling of the paint or sealant.

Moisture content of the wood substrate is also of critical importance. High moisture content wood when heated will yield evaporation of the moisture and hydraulic pressure under the paint or sealants which can lead to peeling or bubbling. Always select the lowest moisture content wood substrate.
3.2.2 FRAMING DEPTH and FINISHING GUIDES

This fireplace comes with one standard finishing guide that will be used with any inside finish decorative front. Grace fronts have optional finishing applications depending on what wall finishing material and what finished look you want to achieve. Refer to the grace finishing guide options.

It is important to know what wall finish is being used and what finish option is preferred prior to unit installation when choosing a Grace front.

When the wall finish material will exceed 2 ½” in depth, the Grace (Option 3) guide kit will be required to allow the decorative front to install properly.

All finish guides, standard or optional, protrude 1” from the face of the unit. Factory guides are installed with rivets and can be removed with a ¼” drill bit.

The finish guide used should be permanently left in place.

3.2.3 GRACE FRONT GUIDE OPTIONS

This fireplace comes with guides to ensure finish materials do not encroach into the convection air area of the fireplace. Some decorative Front models for this fireplace have optional guides for different finishing and appearance options.

There are three options for finishing the fireplace when installing a Grace front.

Please read the following instruction before installing the finishing material on the front of this fireplace. If you have any questions about finishing the fireplace, contact a Mendota dealer or the Mendota Service Department.

• To prevent damage, remove any decorative front, screen, or door from the fireplace and mask the fireplace glass frame prior to installation of finish materials

3.2.3.1 Option 1: Installing Front On Top Of Finishing Material

Note: No extra parts required. Option 1 employs the inner guides that are factory installed.

Option 1 requires that your finish material be less than 2.5” thick, including backing materials and reasonably flat. If your finish material thickness exceeds 2.5” then use Option 3 Guides, see “Option 3.

If your finish material is rough or lightly colored and extends past 1”, you may be able to see the material behind the screen at certain angles.

After the fireplace is installed and the finishing material installation is complete the decorative front can be hung on the fireplace. The finished look is similar to hanging a picture frame on a wall where the frame protrudes out from the wall.

Because the screen is attached to the back of the Grace or Willowbrook front, there will be a ¾” gap between the frame and wall.

If you do not want this gap but want the frame to mount over the finishing material, then consider using Option 2.
3.2.3.2 **Option 2: Installing The Front On Top Of Finishing Materials With The Screen Recessed**

**Note:** Order “template kit” or Option 2 in the pricing sheet.

Option 2 requires that your finish material be less than 2.5” thick including backing materials and reasonably flat. If they are not, use Option 3.

Use the reference chart or pricing to ensure you have the necessary guides/templates.

3.2.3.3 **Option 3: Installing Front Flush Or Recessed Into Wall**

**Note:** You must order guide kit Option 3.

This option allows the front to mount with any finish material. It is a “recessed” or “flush” finish.

Use the reference chart or pricing sheets to see which guide kit is required for each decorative front type.
3.2.4 Recommendations for Television Installation

Note: The model depicted in the images is a representation of a Mendota Hearth fireplace. These recommendations apply to all Mendota Hearth Fireplaces.

When planning to install a television or other heat sensitive product above your fireplace, there are some points to consider.

Many television manufacturers specify in their installation instructions that the television must not be installed near or above a heat source. The decision to install a television near or above a Mendota fireplace rests solely on the consumer. It is the consumer's responsibility to satisfy television specifications and insure the television will not exceed maximum operation temperatures. Mendota Hearth will not be held liable for any adverse effects on a television or other products located near to a Mendota Hearth fireplace.

The drawings below show recommendations that may be used as a guide for those consumers that decide to locate a television above a Mendota Hearth fireplace. These recommendations have been found to reduce the heat impact to a television when installed above a Mendota Hearth fireplace.

3.2.4.1 Recommendation 1: Add a mantel

Add a mantel above the fireplace. The mantel shall be at least 2 inches deeper than the depth of the television, and at least as wide as the television. The mantel shall be mounted so that its top surface is a minimum of 18 inches above the top air gap of the fireplace.

Attention: If the mantel is constructed of combustible materials, make certain that the entire mantel meets the clearances to combustible mantel requirements.
3.2.4.2 **Recommendation 2: Create a recessed cavity**

Frame a recessed cavity above the fireplace. The cavity shall be at least 6 inches taller and 6 inches wider than the television. The cavity’s bottom surface must be a minimum of 24 inches above the top air gap of this fireplace. The cavity must be deep enough for the television to be recessed at least 2 inches in from the wall.

3.2.4.3 **Recommendation 3: Install a heat transfer system**

Mendota Hearth offers three heat transfer systems that take heat from the fireplace and redirect it to another area. When used correctly these heat transfer systems can make it possible to mount a television above the fireplace without installing a mantel or creating a recessed cavity.

**Note:** Heat transfer systems are not available for use on M27 model fireplaces.

**WARNING:** The convection fans on the fireplace must be turned off to insure the heat from the fireplace is redirected through the heat transfer system. Turning the convection fans on will force heated air out the front of the fireplace, heating the surrounding area.

- On fireplaces with a millivolt system: DXV35 Timberfire, DXV42, DXV60, M50 the convection fans must be disconnected from power to insure they cannot be turned on.
On fireplaces with electronic ignition system that come with a PF2 remote the convection fans function must be programmed out of the remote. This will ensure that the convection fans cannot be turned on. Follow the directions below to remove the convection fans function from the remote.

1. Remove a battery from the remote.
2. Hold down both the ON/OFF key and MODE key and reinstall the battery.
3. Continue to hold the ON/OFF key. Release the MODE key. Press the MODE key once to highlight the convection fan function.
4. While still holding the ON/OFF key press the DOWN ARROW key. The display will change from “Set” to “Clr” to indicate that the convection fan function has been disabled.
5. Release the ON/OFF key.

3.2.4.3.1 Mendota Cool Wall
The Mendota Cool Wall system uses natural convection to take heat off the wall directly above the fireplace and redirects it up and away from surrounding areas. Testing has shown that when using a Cool Wall system, temperatures above the fireplace are reduced making it possible to mount a television 15” above the fireplace’s top air gap.
3.2.4.3.2 Versiheat
The Versiheat system uses a fan to redirect heat from the fireplace to an alternate room in the home.

**WARNING:** To reduce temperatures above the fireplace for mounting a television the Versiheat system must always be on when the fireplace is in operation. Because the Versiheat system must be running to reduce temperatures the fireplace cannot be operated during a power outage.

Testing has shown that when using two Versiheat systems temperatures above the fireplace are reduced making it possible to mount a television 15" above the fireplace’s top air gap.
3.2.4.3 FlexHeat

The FlexHeat system uses two inline fans to redirect heat from the fireplace outside the home or to an alternate room in the home.

**WARNING:** To reduce temperatures above the fireplace for mounting a television the FlexHeat system must always be on when the fireplace is in operation. Because the FlexHeat system must be running to reduce temperatures the fireplace cannot be operated during a power outage.

Testing has shown that when using the FlexHeat system temperatures above the fireplace are reduced making it possible to mount a television 12” above the fireplace’s top air gap.
### 3.2.5 Venting

The ML72 Fireplace must be vented to the outside and must use one of the Mendota approved power vent ducting systems. **Do Not Use any silicone sealants at pipe joints. Stove gasket cements may be used at pipe joints but is not required.**

The ML72 Fireplaces requires coaxial rigid- 5” diameter exhaust & 8” diameter air inlet and approved power vents for most installations. All UL Listed Coaxial Rigid 5”X8” Vent pipe components are approved for use. Do not mix components of different brands or series. Always use the same brand and series components throughout the entire vent system.

All warranties will be voided and serious fire, health or other safety hazards may result from any of the following actions: Installation by unauthorized personnel; installation of any damaged component; unauthorized modification of vent system; installation of any components not approved by Mendota; failure to meet all clearance requirements; failure to properly twist-lock and positively seal all components. Consult local building codes before beginning the installation.

**WARNING:** Always maintain required clearances (air spaces) to combustibles to prevent a fire hazard. Do not fill air spaces with insulation. Check installation instructions for minimum clearance requirements between the outer walls of the vent pipe and nearby combustible surfaces. Be sure to check the vent termination clearance requirements from decks, windows, soffit, gas regulators, air supply inlets, and public walkways, as specified in these installation instructions and local building codes.

**SAFETY PRECAUTIONS FOR THE INSTALLER:**
1) Wear gloves and safety glasses for protection; 2) Exercise extreme caution when using ladders or on rooftops; and 3) be aware of electrical wiring locations in walls and ceilings.

This gas appliance and vent system must be vented directly to the outside of the building, and never attached to a chimney serving another solid fuel or gas burning appliance. Each direct vent gas appliance must have its own separate vent system. Common vent systems are prohibited.

To assure proper venting performance of this high-performance Mendota Direct Vent Fireplace, it is critical that all brands of vent pipe sections are sealed tightly and leak-proof. This means that all pipe sections must be carefully rotated into the fully "twist-locked" position.

We strongly recommend that fixed length pipe sections be used in place of telescoping sections whenever possible.

### 3.2.5.1 COMPONENT "TWIST-LOCK" CONNECTION PROCEDURE

DuraVent and American Metals pipe and fittings are designed with special twist-lock connections. Twist-lock procedure is as follows: four (4) indentations, located on the female ends of pipes and fittings are designed to slide straight in to the male ends of the adjacent pipes and fittings, by orienting the four pipe indentations so that they match and slide into the four entry slots on the male ends.

Push the pipe sections completely together then twist-lock one section clockwise, approximately ¼ turn until the two sections are fully locked. The female locking lugs will not be visible from the outside on the black pipe or fittings. They may be located by examining inside of the female ends.
3.2.5.2 Flue Venting Components Identification Diagrams

Prior to installing at altitudes higher than 7500, please contact the Mendota technical service department for specific venting requirements and venting restrictions.

3.2.5.3 **Approved Vent Systems**

One of three power vents must be installed with this fireplace. Choose the correct power vent according to the required vent run. For detailed installation instructions follow the included with each power vent system.

- The fireplace must be vented using a Mendota approved power vent.
- The total vent length must be between 1’ to 80’ and can use up to 6 90° elbows or combination of other elbows equaling 90°.
- For horizontally terminated vent runs that are under 25 feet power vent kit AA-11-04071 must be used.
- For horizontally terminated vent runs that are over 25 feet power vent kit AA-11-04072 must be used.
- For vertically terminated vent runs use power vent kit AA-11-04100.

Reference the diagram below for approved venting configurations.
3.2.5.4 **Exterior Vent Locations and Restrictions**

Note: All measurements are to be taken from the edge of the Power Vent.

---

A = clearances above grade, veranda, porch, deck, or balcony [* 12 inches (30 cm) minimum]
B = clearance to window or door that may be opened [* 12 inches (30 cm) minimum]
C = clearance to permanently closed window [minimum 12 inches (30 cm) recommended to prevent condensation on window]
D = vertical clearance to ventilated soffit located above the terminal within a horizontal distance of 2 feet (60 cm) from the edge of the terminal [0 inches (0 cm) minimum]
E = clearance to unventilated soffit [0 inches (0 cm) minimum]
F = clearance to outside corner [6 inches (15 cm) minimum]
G = clearance to inside corner [3 inches (7.5 cm) minimum]

H = * not to be installed above a meter/ regulator assembly within 3 feet (90 cm) horizontally from the center-line of the regulator
I = clearance to service regulator vent outlet [* 6 feet (1.8 m) minimum]
J = clearance to nonmechanical air supply inlet to building or the combustion air inlet to any other appliance [* 12 inches (30 cm) minimum]
K = clearance to a mechanical air supply inlet [* 6 feet (1.8 m) minimum]
L = ^ clearance above paved side-walk or a paved driveway located on public property [* 7 feet (2.1 m) minimum]
M = clearance under veranda, porch, deck, or balcony [0 inches (0 cm) minimum**]

^ a vent shall not terminate directly above a side-walk or paved driveway which is located between two single family dwellings and serves both dwellings
** only permitted if veranda, porch, deck, or balcony is fully open on a minimum of 2 sides beneath the floor
* as specified in CGA B149 Installation Codes. Note: local Codes or Regulation may require different clearances
* for U.S.A. Installations follow the current National Fuel Gas Code, ANSI Z223.1
3.3 ELECTRICAL TECHNICAL REFERENCES

3.3.1 AC Power Requirements

WARNING: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing.

For normal operation, this appliance requires 120 VAC, 3.5 Amp power. The AC power supply to this Fireplace must be hot at all times and shall not have a switch installed in it.

This fireplace requires a power vent that must be wired to the fireplace. 14/2 solid CU wire must be used to connect the power vent to the fireplace.

This appliance is equipped with an electrical junction box on the right side.

3.3.1.1 Planning for AC Power Connection

On the right side of the fireplace, you will find an electrical junction box with a two strain relief clamps. To connect AC power to this Fireplace and the power vent, follow these steps:

1. Remove the junction box cover plate (secured with four screws), route the 3 wire end of an extension cord or house power wire cable through one of the strain reliefs in the cover plate.

2. To connect the power vent 14/2 solid CU wire must be run from the fireplace to the power vent. Route one end of power vent wire through the second strain relief on the cover plate.

3. Locate in the manual packet the two plugs shown in the photo. One is labeled TO HOUSE POWER and the other is labeled TO POWER VENT.

4. Strip the ends of the house power wires and the power vent wires. Connect each color-coded wire to corresponding colored wires on the two plugs. Use the supplied wire nuts to connect each wire pair ends.

Note: When connecting two braided wires using wire nuts, strip both braided wire ends at least ½” and twist the two bare ends together before using wire nuts. When connecting a braided wire to a solid copper wire, strip the solid copper wire end ½” and the braided wire end ¾”. Twist the braided wire around the solid copper wire end before applying the wire nut.
5. Plug the two wires into the plugs on the back of the outlet box. The house power plugs into the plug that is towards the front of the fireplace. The power vent plugs into the plug towards the rear of the fireplace. The plugs are designed so that they cannot be plugged into the wrong place.

6. Once the wires are plugged in, place the wires into the junction box and reinstall the cover plate.

7. The other end of the power vent wire must be wired to the power vent blower housing. The power vent has an electrical connector block mounted internally. The wiring must be connected to this block. To access the block first remove the decorative cover and blower cover from the power vent.

8. Run the wires from the fireplace through the strain relief on the back of the power vent and through the power vent to the terminal block. Connect the ground wire to the ground screw and connect white and black wires as shown in the photo and diagram.

9. After the wires are connected remove any slack in the wire to ensure that the wire will not touch the fan housing inside the power vent. Then tighten the strain relief to secure the wire.

10. Reinstall the blower cover and decorative cover.
3.3.2 PF2 Ignition System Diagram

NOTES:
- CONNECT WIRES IN JUNCTION BOX ON THE RIGHT SIDE OF THE FIREPLACE TO HOUSE POWER USING THE SUPPLIED WIRE NUTS.
- REPLACEMENT WIRE MUST BE OF THE SAME SIZE AND TYPE OF INSULATION AS ORIGINAL.
- THE APPLIANCE MUST BE ELECTRICALLY CONNECTED AND GROUNDED IN ACCORDANCE WITH LOCAL CODES OR, IN THE ABSENCE OF LOCAL CODES, WITH THE CURRENT NFPA 70-NATIONAL ELECTRIC CODE OR CSA C22.1-CANADIAN ELECTRICAL CODE.
- LABEL ALL WIRES PRIOR TO DISCONNECTION WHEN SERVICING CONTROLS. WIRING ERRORS CAN CAUSE IMPROPER AND DANGEROUS OPERATION. VERIFY PROPER OPERATION AFTER SERVICING.
3.4 PLUMBING TECHNICAL REFERENCES

3.4.1 Gas Supply Requirements

NOTE: if Fireplace is to be operated with LP gas, see Chapter 4.10 Natural Gas to LPG Conversion in this manual before proceeding.

CORRECT GAS PRESSURE AND PROPER GAS SUPPLY LINE SIZING IS IMPERATIVE TO THE SUCCESSFUL PERFORMANCE OF YOUR MENDOTA GAS FIREPLACE. BE SURE THE GAS SUPPLIER OR PLUMBER CAREFULLY CHECKS FOR CORRECT GAS PRESSURE AND GAS LINE SIZING WHEN INSTALLING THE FIREPLACE.

IT IS CRITICAL TO CAREFULLY CHECK FOR GAS LEAKS WHEN HOOKING UP THE FIREPLACE. CHECK WITH SOAP AND WATER SOLUTION OR COMBUSTIBLE GAS SNIFTER.

BE SURE TO INSTALL CSST FLEX GAS LINE WITH BRASS-TO-BRASS FITTINGS TO PREVENT GAS LEAKS AT CONNECTIONS.

GAS SUPPLY PIPING MUST INCLUDE A DRIP LEG TO ELIMINATE THE POSSIBILITY OF CONTAMINANTS ENTERING THE GAS TRAIN. ADHERE STRICTLY TO LOCAL AND NATIONAL CODES.

3.4.2 Gas Supply Line Sizing

This Mendota Gas Fireplace comes equipped with a 1/2" N.P.T. Female inlet. Gas supply piping must enter the Fireplace cabinet on the right side.

Use the table, below, to determine the proper gas line diameter that must be installed to run from the supply regulator to the fireplace. Refer to the following table for proper gas pipe diameters.

<table>

</tbody>
</table>

NOTE: Some areas allow copper tubing or galvanized pipe - check with local approval agencies and codes NEVER use plastic pipe.

![Figure 3-23 Gas Pressure Test Ports](Figure 3-23 Gas Pressure Test Ports)
3.4.3 Gas Pressure Requirements and Checking
Two pressure taps for checking input and output gas pressures are located on the main gas valve. A qualified installer should use this fitting for setting the correct gas pressure during initial installation.

The appliance and its appliance main gas valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressures in excess of 1/2 psi (3.5 kPa).

The appliance must be isolated from the gas supply piping system by closing its equipment shut-off valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psi (3.5 kPa).

3.4.4 Drip Leg Recommended
It is recommended that a drip leg/ sediment trap is installed within the main gas supply line serving this appliance.

3.4.5 Manual Gas Shutoff Valve Requirement
If local building codes require one, obtain an external keyed wall-mounted or floor-mounted manual gas shutoff valve approved per local gas plumbing codes and install per local gas plumbing codes in the specified location. Local requirements supersede all other codes.
3.4.6 Factory Installed Manual Gas Shutoff Valve

A manual gas shutoff valve is factory installed and located on the right side of the fireplace. Remove the slotted cover plate on the right side of the fireplace to access the valve handle. To operate the manual gas shutoff valve, insert the tip of the glass latch tool into the hole in the ball valve handle, or use your hand. Rotate the tool downward 90-Degrees or until it stops to fully close the Valve. To open valve, insert tool in valve bracket rotate upward 90-degrees or until it stops.

![Ball Valve Handle]

Figure 3-27 EMERGENCY GAS SHUTOFF

3.4.7 Gas Inlet Fittings Information

Caution: Before you run the gas line, read, understand and properly calculate the required gas line size. Improper (too small) gas line size application can lead to improper burner ignition and can cause property damage and/or injury. If you are not qualified or certified to run a gas line, do not proceed. Contact a qualified Gas Plumber.

The gas inlet fitting supplied with this Fireplace provides a 1/2" female NPT fitting. This requires you to supply a ½” NPT male fitting for connection to this appliance.

Based on the gas line size you have selected use an appropriate NPT fitting to adapt and connect to the 1/2” male NPT adapter.
3.4.8 Gas Input Rate Verification

3.4.8.1 Natural Gas Input Rate Verification
1. Verify main orifice size. The main orifice body has the orifice hole size stamped on it. NG orifice size shall be #25 for all elevations.
2. Verify that the Manifold Gas Pressure is within 3.5" WC +/- 1/8". Once setup, read the main home gas supply meter reading.
3. Write the initial reading here >> initial gas meter reading __________
   Turn off all other appliances and their pilot flame in the home.
4. Run this appliance for a period of 30 minutes on maximum flame size. Turn off main burner and pilot flame. Read the main home gas supply meter reading after the 30 minutes of burn time.
5. Write the reading here >> final gas meter reading __________
   Calculate the following:
6. FINAL GAS METER READING - INITIAL GAS METER READING...Subtract initial gas meter from final gas meter reading. This will yield the number of Therms used during the 30-minute burn time ______________.
7. Multiply the result in Item #6 by 100,000.
8. Multiply the result in Item #7 by 2. Write down the result here >> __________
9. The result in item #8 shall be at least the maximum input rate (48,500 Btu/Hr) for all altitudes.

3.4.8.2 LPG Input Rate Verification
Verify main orifice size. The main orifice body has the orifice hole size stamped on it. LPG orifice size shall be #45 for all elevations.
Verify that the manifold gas pressure is within 10.0" WC +/- 1/8".

3.4.9 High Altitude De-Rating
If you are de-rating this appliance at a high altitude, attach the High Altitude De-Rating Label, supplied in the Owner’s Manual Packet, to the back surface of the listing label plate located in the air gap on the side of the Fireplace. If you are also converting the Fireplace for LP Gas attach the labels included with the conversion kit to the same surface. Prior to attaching the label, fill in all the information that is requested on the label.

For installations from 610-1370 meters (2000-4500 ft.) the orifice sizes (DMS) for Natural Gas are #25 and Propane Gas are #45, respectively. See data plate for additional information. For high altitude installations consult the local gas distributor or the authority having jurisdiction for proper rating methods. If the installer must convert the unit to adjust for varying altitudes, the information sticker must be filled out by the installer and adhered to the appliance at the time of conversion.

This appliance has been converted for use at an altitude of:

4 INSTALLATION INSTRUCTIONS

4.1 INSTALLATION CHECKLIST

The instructions provided in this chapter are arranged in the sequence of occurrences.

This installation checklist is supplied as a guide for installers to follow step by step. As you complete each step of the installation work, check mark the completed work item in the list, below. All items in this installation checklist must be completed. When all work is complete, fill in your name and the date this installation was completed.

☐ Unpack the Fireplace body.
☐ Open and inspect the Manual Packet.
☐ Unbolt the Fireplace body from the wooden pallet.
☐ Bend up the shipping clips.
☐ Place Fireplace body inside Framed Chase, level and plumb fireplace body and secure to framing studs.
☐ Open the Fireplace Glass Door.
☐ Install the Accent Light bulbs and Light Lenses.
☐ If planning to burn LPG, perform the NG to LPG conversion work.
☐ Install Vent System.
  ☐ Sealant is not required at vent joints. **Do not use silicone sealants in vent connection joints anywhere.**
  ☐ Adjust vent damper to match vertical chimney length. See 4.12 Vent Damper Adjustments
  ☐ Co-axial vent rigid pipe and power vent are installed by a Mendota approved serviceperson in accordance with instructions.
  ☐ All joints are secured, "twist-locked" and leak-proof.
  ☐ Telescoping sections are not separated. They were used as complete assemblies.
  ☐ Proper exterior and interior clearances for vent systems and locations for power vent termination are maintained.
☐ Connect Gas Supply to the Fireplace. Verify that gas pressures are proper and perform a complete leak test of all field installed gas joints and factory installed gas train joints using a gas sniffer or leak check solution.
  ☐ Verify orifice sizes.
  ☐ Verify gas input rates.
☐ Connect Electrical Supply to the Fireplace. See 3.3 Electrical Technical References
☐ Install firebox inner liner kit. Follow instruction supplied with the Liner Kit.
☐ Install glass, log set, coals and inswool media.
☐ Install Glass door and assure that it is in proper closed position and centered in firebox opening.
☐ Test fire Fireplace.
☐ Teach consumer how to use remote control and all functions of this Fireplace

This installation was performed and completed by: ___________________________  Date: ___________________________
4.2 UNPACKING THE FIREPLACE

The Fireplace arrives from the factory on a wooden pallet with a cardboard box encasing the pallet and Fireplace. To remove the outer box, identify and remove four Philips head drywall screws that secure a cardboard L pincher at the bottom of each corner of the box.

Lift the outer box vertically straight upward until lower edge of the box clears the top of the unit body. Set the box aside. Mendota recommends recycling the outer box.
4.3 CONTENTS OF THE MANUAL PACKET

Once the outer box is removed, you will find the Fireplace body and a manual packet white box. This manual packet white box includes the items shown in the table, below. Contact Mendota Technical Service if any parts are missing.

*Figure 4-2 Manual Packet Contents*

4.4 WHAT IS NOT INCLUDED WITH THIS APPLIANCE?

Log set, firebox lining or decorative front are not included with this base Fireplace product. One of many log set options, firebox inner liner options and decorative fronts options must be selected and purchased separately.

4.5 UNBOLTING FIREPLACE FROM PALLET

The Fireplace body is bolted to the pallet top surface using 5/16” X 1” Lag Screws in eight points. Two on each side and four at the rear. Use a 1/2” socket and wrench to remove the lag screws and detach fireplace from the pallet top.

*Figure 4-3 Unbolting Unit from Pallet*
4.6 BENDING UP THE SHIPPING CLIPS

Once the unit is detached from the pallet by removing the securing lag screws that hold these shipping clips to the pallet, either bend these clips up 90-degrees or break them off using a screw driver and back and forth cold working motion (see below). The clips can also be left bent down and used to screw the fireplace to the floor. A bending relief is provided within the clip to ease bending or breaking. Bending the shipping clips up or removing them will be necessary for Fireplace units which are to be installed in narrow width or shallow depth openings.

To bend the clips up or to break them off, follow these procedures:
1. Fire up the tip of a flat screw driver (longer screw driver is better) under the clip.
2. Lift screw driver handle upwards and bend the clip up about 45-degrees.
3. Remove screw driver. Fire up screw driver tip into one hole in clip. Lift screw driver up. To break clip off, repeat up down motion of screw driver seven to eight times.

**Figure 4-4 Shipping Clip**

**STEP 1 & STEP 2**

**Figure 4-5 Bend Up Clip 1**

**STEP 3**

**Figure 4-6 Bend Up Clip 2**
4.7 TO REMOVE DOOR

Use the glass latch tool to disconnect the spring latches from the glass frame. Insert tool into hole in latch, pull towards you and rotate 90-degrees to disengage top latches. Remove tool. There are four spring latches on top of this gas fireplace. Always make certain the hook glass latches are in the upside-down position after removing the glass frame. This upside-down latch position will make it easier to reinstall the glass frame later.

With both hands, rotate top edge of glass frame away from unit, approximately 8”.
Lift glass frame up 1”, at an angle, and move away from unit.
Door is now free from unit.

**NOTE:** Always check glass gasket condition and gasket seal any time the glass door is removed and when reinstalling glass door.

4.8 TO REPLACE DOOR

1. Line up the two bottom tabs in glass frame bottom with slots on the front of the fireplace.
2. Center glass frame over firebox; left to right.
3. After door has been placed into slots, rotate door towards firebox until gasket seal is touching the firebox frame.
4. Use the tool provided to connect the spring latches to the glass frame. Insert tool into hole in spring latch, pull latch towards you, rotate latch so the hook is facing downward then release latch to hook to door frame.

Door is now connected and sealed to unit.
4.9 LIGHT BULB AND LIGHT LENS INSTALLATION

WARNING: Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

Before you install a firebox inner, liner kit or a log set. Install the accent light bulbs and the accent light lens kits. To install the light bulb and light lens kit, follow these instructions:

1. Identify the three light bulb sockets. They are located within the top metal baffle.

WARNING: Use a 3/8” hex hand driver to tighten nuts. DO NOT over tighten the nuts. Doing so can crack the light lens.

Caution: Do not touch the light lens with bare hands. Always use the protective foam wrap supplied with the light bulb or a pair of clean cloth or neoprene gloves to handle the light bulb. Touching the light bulb will leave oils and dirt on the lens and will cause premature failure of the light bulb.

2. Slide base of light bulb inside light bulb holder base after aligning the bulb base shape with the recessed shape in the bulb holder. Push up all the way.

3. Next, see diagrams, below. Install the light lens base gasket, light lens, light lens retainer bracket and the four retaining 10-24 nuts.

4.10 NATURAL GAS TO LPG CONVERSION

A natural gas to LP gas conversion kit #HA-112-00027 must be ordered and installed in this fireplace to burn LP gas. LP conversion kit #HA-112-00027 contains the following parts: one motorized LP pressure regulator #05-02-00346, Orifice #65-14-00045 (drill #45), an L-shaped Torx wrench and an LP conversion label.

![LP Kit Contents](image)

4.10.1 Procedure to Convert Fireplace for LP Gas

This fireplace arrives from the factory ready to burn natural gas. If you intend to burn LP gas, it is highly recommended that you convert this fireplace and its pressure regulator, pilot natural gas/LP clip position and burner orifice prior to placing this fireplace in its fireplace cavity.

Follow the step below to prepare this fireplace for conversion to LP gas:

1. Remove the glass frame. Directions to remove the glass frame are in this manual. See section “TO REMOVE DOOR”

2. Remove the floor plate from the fireplace. The floor plate goes around the pilot. When lifting the floor plate be careful to lift it straight up past the pilot hood. Then hold the floor plate at an angle to get it through the front opening of the fireplace.

3. Using a ¼” hex driver, remove the right side front access panel from the fireplace.
4. Next remove the burner from the fireplace. Remove the two screws from each end of the burner. Then rotate the burner 90 degrees to the front so that the burner legs clear the air box. Then slide the burner to the left to remove it from the air shutter box. The burner will then be free and can be removed from the fireplace.

5. You will now be able to access the burner orifice, which is located inside the air shutter box. Using a ½” deep well socket wrench, remove the orifice. When removing and installing the orifices be sure to use a wrench to keep the fitting the orifice screws onto from rotating.

6. Thread a new #45 orifice on the orifice mounting brass fittings. Tighten down the orifice. Next continue to follow the instructions to convert the pilot for LP Gas.
CAUTION: Always use one 7/16” open end wrench and one large pliers or vice grips tool to hold, loosen and
tighten pilot hood base to prevent damage to pilot mount bracket.

7. While holding the pilot base body with large vice grips tightly, loosen the pilot’s hex-shaped base using a 7/16” open end
wrench. Rotate counter clock-wise ¼ turn to loosen.

8. Pilot arrives from the factory set for natural gas. Push natural gas/LP adjustment clip inward all the way to set it for LP. See
detail view, below. If you see “NAT” printing on the adjustment clip, this indicates that the pilot is set to burn natural gas. Push
the clip in so that “NAT” is not visible.

9. Tighten down hex-shaped base of pilot using a 7/16” open end wrench.

10. After the pilot is converted reinstall the burner and floorplate. Remember to be careful when placing the floor plate around the
pilot to avoid damaging the pilot.

11. Next, the pressure regulator will be changed. Access the pressure regulator through the right-side, front access panel that was
removed. If needed the heat shield that sits above the gas valve can be removed. The heat shield is held on with one screw on
the left side of the opening.

12. Shut off the gas supply to the valve and shut down the electric supply.
   Note: Be careful when removing or tightening the screw on the back of the pressure regulator. The screw location is difficult
to access and care must be taken to ensure a proper seal when tightened.
WARNING: Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

13. Figure 1: Using a Torx T20 (supplied) or slotted screwdriver, remove and discard the two pressure-regulator mounting screws (A); pressure-regulator tower (B); and the spring and diaphragm assembly (C), if applicable.

14. Figure 2: Ensure the rubber gasket (D) is properly positioned. The rubber gasket is pre-fitted as part of assembly (E).

15. Figures 3 and 4: Install the new stepper motor pressure regulator assembly. Use the provided screws (F), M4 x 0.7 threaded; length of thread L=(16mm + 0 – 0.5mm), steel material, resistance class 8.8 (Figure 5).

16. Manually thread the two-conversion kit mounting screws into the valve body. Use a standard screwdriver or T20 Torx bit and tighten to the screws with a fixing torque of 25lb-in, plus or minus 5.

   **Note:** If the threads of the value are stripped or damaged, replace the valve.

17. Install the enclosed identification label (G) to the valve body where is can be easily seen.

   Warning: Installation should be carried out in a clean environment.

   Warning: This modulating conversion kit must only be applied as part of a conversion kit supplied by the fireplace manufacturer for specific fireplace and type of gas being converted.

   Warning: Correct operation of the system cannot be guaranteed if the conversion kit or valve have been dropped or sustained strong impact.
4.10.2 Burner Ignition Characteristics

Note: Connect gas supply and verify that the minimum inlet and outlet pressures are conforming.

Once the conversion to LPG and all the above steps have been completed, light the main burners. Use remote transmitter to turn on pilot light and burners. Main burner should now light IMMEDIATELY and flame should not "lift" off burner. If there is any delay in ignition or if flame is "lifting off" burner, turn off burner and carefully check for proper installation of logs/coals, vent system and proper pilot flame impingement on burner. Logs or coals must not block pilot flame or main burner flame. Vent system must be leak proof.

WARNING: Do not proceed with operation of this fireplace unless burner "cycles" on/off without delays!

4.10.3 Pilot Flame and Burner Relationship Verification

Prior to completing the LPG conversion process, the qualified service technician must light the pilot light and verify the relationship between the pilot light flames and the burner. The pilot light flame directed towards the propagation ports on the burner must overlap the propagation ports on the burner.

The pilot light flames must be a minimum of 1” long and must overlap the propagation ports on the burner as shown in the diagram, below. Verify that the burner ignites quickly and the burner flames propagate smoothly along the entire length of the burners.
4.11 VENTING

WARNING: Proper installation of the vent system, as required in this manual, is vital to the performance of this Fireplace. Oversights or failure to conform to all installation requirements will void the applicable warranty.

The ML72 Fireplace must be vented to the outside using a Mendota approved power vent system.

This fireplace must be properly connected to a venting system in accordance with the manufacturer’s installation instructions. Operation of this fireplace when not connected to a properly installed and maintained venting system can result in carbon monoxide (CO) poisoning and possibly death.

If the vent system of this appliance is disconnected for any reason, the vent and air intake systems must be properly reassembled and resealed before this appliance is put into use.

CAUTION: Each installation must conform to all local, state and national codes. Refer to the national fuel gas code and local zoning and code authorities for details on installation requirements. The Mendota Fireplaces must be vented to the outside in accordance with the latest edition of the National Fuel Gas Code. In the absence of local codes, the installation must conform with National Fuel Gas Code ANSI Z223.1 (NFPA 54), or Canadian Code CAN1-B149 or most current edition, also known as NFPA 54. Do not connect this Fireplace to a chimney flue serving a separate solid fuel or gas-burning appliance.

4.11.1 ML72 Master Venting Chart

Note: This chart is applicable to both natural gas and LP installations.
- The fireplace must be vented using a Mendota approved power vent.
- The total vent length must be between 1 ft. to 80 ft. and can use up to 6 90° elbows or combination of other elbows equaling 90°.
- For horizontally terminated vent runs that are under 25 feet power vent kit AA-11-04071 must be used.
- For horizontally terminated vent runs that are over 25 feet power vent kit AA-11-04072 must be used.
- For vertically terminated vent runs power vent kit AA-11-04100 must be used.
- Maximum vertical rise allowed is 80 ft.
- Reference the diagram below for approved venting configurations.
4.12 VENT DAMPER ADJUSTMENTS

This fireplace is equipped with a vent damper system that can be adjusted using the glass latch tool. Locate damper adjustment rod above the glass frame in convection chamber at the center. Adjust position of damper by judging the flame characteristics after 20 minutes of burn time.

The more open the damper the faster the flames will move and dance. The flames will be more blue in color and shorter. The more closed the damper the slower the flames will move and dance. The flames will be more yellow in color and will get taller. If the flame tips are stringy and dark or causing sooting the damper is too far closed.

To adjust the damper look into the convection air cavity and note the Damper Position Indicator. Hook glass latch tool in the hole at the end of the damper rod, pull outward about 1/8” and turn clockwise to close the vent damper, release. The base of the damper adjustment rod has a pointer that indicates the position of the damper.
4.13 AIR SHUTTER CONTROL AND FLAME APPEARANCE

During initial installation, the air shutter opening should be checked to be certain that the shutter is set correctly at 1/8" open for natural gas and 1/2" minimum open for L.P. gas. NOTE: For altitudes above 5,000’, some variations may be required. Be sure burner and logs are properly installed. After log set has been properly installed, adjustments to the air shutter shall be made for final flame appearance. These small shutter adjustments can be made by the following procedure:

**NOTE:** All adjustments to the air shutter setting must be made by a qualified installer, service agency, or the gas supplier. Very small changes in shutter settings make major changes in flame appearance.

The burner air shutter adjustment cable is located on the right side of the fireplace. It is located under a slot in the bottom grill. The shutter cable can be accessed through the slot and adjusted using the glass latch tool. To open or close the air shutter insert the glass latch tool tip in the ring terminal's ring hole. Push the cable to close the air shutter or pull on the cable to open the air shutter.

1. If flame is too blue, close air shutter in small 1/8" increments until flame turns desired realistic yellow. Use glass latch tool to hook end and slide control.
2. If flame is causing soot on viewing glass, open air shutter fully until sooting stops. Continue burning unit with air shutter fully open for four to six hours until all internal deposited soot has burned off.
3. Once deposited soot has disappeared, close air shutter in increments of 1/8".

**LPG Air shutter settings hint:** A properly adjusted air shutter setting will yield burner flames that have an approximate 2" high blue color base. If yellow colored flames are starting at burner level, air shutter is closed too far and will create soot. If you observe that the flame is yellow starting very close to or at the burner surface level, open air shutter. Also, if a log or part of a log is suspended and hanging inside a yellow portion of the flame, soot can form easily on the part of the log that is inside the yellow flame area.

**IMPORTANT:** Try each new shutter setting approx. ½ hr. before making additional changes.

---

**USE THE GLASS TOOL TO ACCESS THE ADJUSTMENT CABLE THRU SLOT.**

---

**AIR SHUTTER ADJUSTMENT CABLE LOCATED HERE**

---

**AIR SHUTTER ADJUSTMENT CABLE**

---

**IMPORTANT: Try each new shutter setting approx. ½ hr. before making additional changes.**
4.14 LOG SET/ MEDIA INSTALLATION

Three distinctive wood species log sets are available as options for this model Fireplace.
1. Norway Spruce Log Set
2. White Oak Log Set (not shown)
3. Birch Log Set

In addition to the log sets other medias are also available. These media kits can be combined or used with log sets. These include:
1. Clear Glass Diamond, ¾”
2. Clear Glass Diamond, ¼”
3. Black Glass Diamond, ¾”
4. Midnight Black Glass
5. Liquid Clear Glass
6. Ice Cube Glass
7. Natural River Rock
8. White Tumbled Marble

Installation Instructions for each log set and media kit are included with the individual kits.

Note: Installer, save and give the copy of the Log Set Installation Instructions to the homeowner for future references.

4.15 LIGHTING CHECKLIST

Be sure to check these items before final operation of the Fireplace.
☐ All items on "Installation Checklist" must be completed.
☐ Carefully follow all lighting and log installation instructions. Make certain that pilot flame and burner light correctly.
☐ Gas leaks and gas pressures prior to installing facing materials is checked.
☐ Fresh batteries are in remote control. Follow “First-Time Lighting Instructions” to synchronize the remote control and the ignition module.
☐ Air shutter opening 0” to ⅛” natural gas or ⅛” to ½” LP gas is checked.
☐ All lighting and log installation instructions were followed.
☐ Burner lights and flame runs promptly to the entire burner.

Note: Do not proceed with operation unless burner cycles "on/off" without delays.
☐ Flame is "stable" and does not "lift" off burner. If flame lifts off burner, turn unit off and check that all vent pipes are "twist locked" and leak proof, the vent cap is "right side up". Do not proceed with operation if flame is "lifting off" burner.
☐ DO NOT proceed with operation unless burner cycles "on/off" without delays and the flame is "stable" and not "lifting" off burner after 5 minutes of initial ignition.
5  HOMEOWNER INFORMATION

Welcome to Mendota. We are proud to be the makers of world-class direct vent fireplaces and Fireplaces. We understand that a fireplace is a long-term investment, and we are happy you have chosen us to be a part of your family. We are committed to quality and satisfaction for all Mendota owners. Thank you for choosing a Mendota to be a source of comfort and beauty in your home.

We have designed this manual to help you enjoy all that your Mendota Fireplace has to offer. You will find tips, operating instructions, and frequently asked questions to support the features and functions of your Fireplace.

We want you to enjoy your Mendota for years to come. If you have any additional questions regarding operation of your Fireplace, please contact your Mendota local dealer.

5.1  AESTHETIC CONSIDERATIONS

Burning or static fireplaces are a major aesthetic focus in any room. In addition to offering the most realistic log details, textures, coloration and the most realistic wood fire options, Mendota also offers a large array of internal firebox lining options and external decorative options. Visit www.mendotahearth.com and your local Mendota dealer’s show room to view all options available.

5.2  HEATING PERFORMANCE

Air movement options for maximizing heat circulation that can be considered are operating the fireplace’s convection blowers, continuous operation of central heating furnace blowers or room ceiling fans. The heat output of the fireplace can be reduced by reducing flame height using the remote control. Blowers can be turned down or turned off to reduce heat distribution. Mendota also offers optional kits to move the heat from the fireplace to a different room or outside.

5.3  IMPORTANT INFORMATION FOR HOMEOWNER

Before you begin operation of your Gas Fireplace, read and familiarize yourself with information provided in the following chapters of this manual:

Chapter 3.2.6 Normal Surface Temperatures
Chapter 3.1.1 Mendota Fireplace Curing Instructions
5.4 OPERATING INFORMATION

5.4.1 Using Your Remote Control
Your Mendota remote control is pre-programmed to your fireplace. Ensure you have installed 3 AAA batteries into your remote. Press the top button on the remote control. If you do not hear a beep when you press this button, follow the instructions below to synchronize your fireplace and remote control.

5.4.2 Synchronizing the Fireplace and Remote Control

Master Switch™ The master switch acts as the main safety on/off control for the main gas burners only. When the master switch is in the off-condition, the main gas burners will not turn on. However, all other fireplace functions, including the standing pilot mode, will operate. When the master switch is in the on-condition, the main burners will function as designed.

In case of an emergency, toggle the master switch to off to turn off the main burners.

To synchronize the fireplace and remote control, follow the steps below:

1. Toggle the master switch to “ON”. The switch is ON when pointing to the left, as shown in the diagram below.
2. Locate sync switch (see diagram below). Press the sync button and release. The fireplace will beep three times indicating that it is ready to synchronize with a remote control. (Note: If you do not hear any beeps when you press the sync button, contact your Mendota dealer or installer for assistance.)
3. Within seven seconds, press the “on” button on the remote control. The fireplace will beep four times to indicate that the remote control’s command is accepted and sets to the particular code of that controller. Your system is now initialized.

![Diagram of Master and Sync Switches](image-url)
5.4.3 Remote Control Functions

**NOTE:** You will hear an audible beep once every time a remote-control button is pressed, signaling that the command has been received. If you do not hear the beep, press the button again.

Locate the four function buttons on the remote control:

1. **On/Off Button:** This button turns the fireplace on or off. When this button is pressed and the system is off, the pilot will ignite. After pilot ignition, the pilot will light the main burners. Refer to IPI and CPI Modes in this manual for pilot ignition.
2. **Thermostat Button:** This fireplace can only be operated in Manual(OFF) mode. Thermostat mode is disabled for this fireplace.
   a. **Manual (Off):** In this mode, the fireplace can be turned on, regardless of the room temperature. The actual room temperature has no effect in this mode. All other functions such as fan speed control, flame height control, secondary burner on/off control and accent light intensity controls are manually controlled.

   **WARNING:** Do not leave this appliance burning and unattended for long period. Leaving the appliance burning for long periods unattended can lead to overheating of the living space which can negatively affect plants, animals, infants and vulnerable people.

   **Note:** In Manual Mode, the fireplace will automatically shut off after 12 hours of continuous use. In Normal Thermostat and Smart Thermostat modes, if the fireplace does not receive a prompt from the remote-control transmitter for 60 minutes, the fireplace will automatically shut off. This can occur if the remote control is moved to another room or if the remote batteries are very weak.

3. **Up/Down Button:** This button is used to increase or decrease the flame height, fan speed, and accent light intensity.
4. **Mode Selection Button:** This button is used to toggle between the various function icons: flame height, fan speed, accent light.
5.5 REMOTE CONTROL OPERATING INSTRUCTIONS

5.5.1 To Turn on the Fireplace
NOTE: If the fireplace does not respond to the remote-control commands, the fireplace system may have entered “safety lockout” mode. To reset the system, see Chapter 5.10.11 Why won’t my fireplace turn on?
1. Press the on/off button. The remote-control display will show all active icons on the screen and the fireplace will emit an audible beep.
   After the ON button is pressed first the power vent will turn on. The power vent will run until a draft is established within the fireplace. This can take a few seconds to a couple of minutes. Once a draft is established the pilot will light followed by the burner.

5.5.2 To Turn off the Fireplace
Press the on/off button.
The fireplace will turn off. The power vent will continue to run for about a minute to expel all exhaust gasses.

5.5.3 Understanding Your Remote-Control Icons
Your remote control displays and controls the following functions. See below for detailed control explanations.
Note: the “AUX On”, “Rear Burner” and “Thermostat (ON/SMART)” functions are not used in this fireplace.

![Remote Control Icons](image)

*Figure 5-1 Remote Control Icons*
5.5.4 Icon Details

Mode Button: Pressing the mode button toggles between the various available functions: flame height, fan speed, accent light intensity.

Flame Height: Six flame height levels are available. While the flame height icon is displayed, pressing the up or down button once will increase or decrease the flame height by one of six increments. If the flame height is at Level one and the down button is pressed, all burners will turn off. The pilot will also extinguish.

Fan Speed Control: The fan speed can be adjusted through six speeds and off. To activate this function, press the Mode button until it displays the fan icon. Use the up/down arrow button to turn on, off, or adjust the fan speed. Once you set the desired fan control, the system will remember your selected fan speed until you manually change it.

Accent Light: This function controls the accent light functions. Pressing the UP button in this mode will turn on the accent light and allow you to control the 6 levels of intensity. Once you set the desired light intensity, the system will remember your selection until you manually change it.

5.6 HOW DO I CHANGE FROM CELSIUS TO FAHRENHEIT?

To change between °C to °F, follow these steps:
1. Press the ON/OFF button and turn off the fireplace.
2. Simultaneously, press both the mode button and the thermostat button.
3. Look at the LCD display to verify that your desired indicator (°F or °C) is being displayed. If not, repeat Step 2.
5.7 First Time Lighting Instructions

### Warning: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury, and loss of life.

### WHAT TO DO IF YOU SMELL GAS

- Do not light any appliance.
- Do not touch any light switch.
- Do not use any phone in your building.
- Call your gas supplier from a neighbor's phone.
- Follow the provider representative's instructions.
- If you cannot reach your gas supplier, call the fire department for assistance.

#### 5.7.1 Safety Information

- This fireplace is equipped with an ignition device which automatically lights the pilot. Do not attempt to light pilot by hand.
- **Before operating**, smell all around fireplace area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.
- Toggle Master Switch to **ON**. Remote control will not communicate to receiver unless the Master Switch is **ON**.
- Use only the supplied remote control to light the pilot. This valve will not operate if the pilot is not lit and stable.
- Do not use this fireplace if any part has been underwater. Immediately call a qualified service technician to inspect and replace any component which has been under water. Attempted operation may result in fire or explosion resulting in property damage, personal injury, and loss of life.

#### 5.8 OPERATING INSTRUCTIONS

1. Read the above safety information carefully before proceeding.
2. Do not attempt to light the pilot by hand; the door must remain on this unit during pilot ignition.
3. Press the ON/OFF button on remote control to begin the ignition sequence.
   - The fireplace will emit an audible beep. First the power vent will turn on. The power vent will run until a draft is established within the fireplace. This can take a few seconds to a couple of minutes. Once a draft is established the pilot will light followed by the burner.
   - **Warning:** If the pilot fails to light, the system will “lockout”. Press ON/OFF button on remote control to Turn Off the system and reset the “lockout”. Allow five minutes for any gas in the unit to dissipate before attempting to re-light the pilot.
4. Press ON/OFF button on remote control again to start ignition sequence.
5. If the fireplace will not operate, follow the instructions “To Turn Off Gas to Fireplace” below and call your service technician or gas supplier.

#### 5.9 TO TURN OFF GAS TO FIREPLACE

1. Press the ON/OFF button on the remote control.
2. Turn OFF the external manual shutoff valve if was required and supplied by installer and mounted adjacent to fireplace.
3. Turn OFF the internal manual shutoff valve located in the fireplace under the front right access panel.
4. Turn OFF all electric power to the fireplace if service is to be performed.
5.10 FREQUENTLY ASKED QUESTIONS

5.10.1 What to do if I smell gas?
If you smell gas:
➢ Do not light any appliance.
➢ Do not touch any light switches.
➢ Do not use any phone in your building.
➢ Call your gas supplier from a neighbor’s phone.
➢ Follow the provider representative’s instructions.
➢ If you cannot reach your gas supplier, call the fire department for assistance.

5.10.2 Where can I find the model and serial numbers?
When requesting service, you will be asked to provide the model number and serial number to your Mendota dealer. This information will expedite the warranty verification process. The Listing Label contains the model number and serial number for your particular appliance.

This is an example of your listing label:

Listing label location: The listing label is located in the fireplace under the firebox. To access the listing label, remove the center access grill on the fireplace. The label is chained to the fireplace under this grill.

MODEL: ML72 PF2
SN: 3493-

Figure 5-2 Listing Label
5.10.3 Can I use my Fireplace during power outages?
No, this fireplace requires 110VAC power to operate.

5.10.4 What maintenance is required?

5.10.4.1 Required Annual Maintenance

The following procedures must be performed each year by a qualified installer, service agency or the gas supplier.

Note: Any adjustments to burner, pilot or logs must be done by a qualified installer, service agency or the gas supplier.

Recommended steps for yearly maintenance:

1. Clean all lint and dust build-up around the control. Inspect the condition of any wiring under the burner for melting or damage.
3. Visual check of pilot flames is required. Pilot flame must overlap flame sensor and burner ignition ports always. Especially for LP gas applications, always verify visible pilot flame length is at least 1” long.
4. Visual check of main burner’s flames is required.
5. Remove logs and coals and clean away any foreign matter (lint, carbon, etc.) on the burner and logs.
6. Clean under side of the logs for any carbon deposits. Note: Logs should be visually checked for carbon buildup. If carbon deposits are visible on logs, unit should be turned off and a qualified installer, service agency or the gas supplier contacted. Be sure logs are re-installed per instructions.
7. Check condition of glass door gasket, gasket must seal tightly over firebox. Inspect gasket along top and sides of glass. If gasket bulb along top edge or side top areas are discolored to a white color appearance (through the whole thickness of the gasket bulb in a 3” to 12” long area) and the gasket adhesive in no longer functional to stick to glass, then replace the gasket.
8. Visually inspect the vent terminal (vent cap) for leaves, twigs and other debris accumulation. Clean if required.
9. Clean door glass.
10. Clean enamel firebox lining, if one is installed.
5.10.4.2 Periodic Inspection

Follow these steps for periodic inspections:

1. Check to verify that the vent system and power vent terminal are open and free of blockage.
2. Periodic visual check of pilot flames is required. Pilot flame must overlap flame sensor and burner ignition ports always.
   Especially for LP gas applications, always verify visible pilot flame length is at least 1" long.
3. Periodic visual check of main burner’s rear and front flames is required.

5.10.5 How do I clean the viewing glass?

The viewing glass should be cleaned periodically. Exterior glass surface may be cleaned with cleaner as desired. To clean interior glass surface, use Kel Kem Polish Plus (part # 65-06-00455) or a comparable product. Caution: Do not use oven cleaner to clean glass. Clean the glass only when it has cooled to room temperature.

Additives that are put in gas (both natural and propane) to make it smell can be harmful to glass and can leave a white film deposit on the glass. This deposit can be removed, if cleaned in a timely manner, with cleaners such as KEL KEM “Polish Plus” (part # 65-06-00455) or comparable product (contact your dealer).

5.10.6 Is my flame performance correct?

Your fireplace has air shutters, dampers, coals, and embers that can be adjusted depending on your fuel and venting configuration. These adjustments should be made by a qualified technician to achieve the best flame performance. Contact your installer or Mendota dealer if you feel your fireplace is not burning correctly. Improper setup and adjustment is not covered under warranty.

5.10.7 What should I do if my fireplace is sooting?

Sooting is caused by improper installation or air shutter operation. However, some small areas of soot deposits on log surfaces are deemed acceptable. If you observe large soot areas (larger than 1”x1”) on log surfaces or signs of sooting on the door glass (usually a thin black film on the Fireplace viewing glass or on the outside of the home around the vent cap), the unit must be immediately turned off and the local Mendota dealer promptly informed. Mendota dealers will correct "sooting" problems, but Mendota and their dealers are not responsible for damage caused by excessive sooting that has not been immediately brought to their attention. Troubleshooting soot:

| Issue: Thin black coating (soot) forms on viewing glass. | Possible Causes:  
A. Burner Air Shutter closed too much.  
B. Exhaust Damper is closed too much.  
C. Improper log and/or ember placement  
D. Glass door seal is compromised.  
E. Incorrect gas pressure or burner orifice size. | Corrective Action:  
Open air shutter on burner. Check exhaust damper position. It may be closed too far. Open exhaust damper. Check glass gasket for proper seal. Corners of glass gaskets cannot be bulging out. If glass gasket along top edge in the middle is white in color across entire thickness of gasket bulb and gasket adhesive is not functional, replace glass gasket. If sooting continues, shut off unit and call Mendota service person. Have service person check for proper Orifice Sizes and correct gas outlet pressure (3.5” W.C. Nat. Gas; 10” W.C. LP Gas).  
NOTE: To clean glass - remove glass and wipe glass with cloth or paper towel. |

5.10.8 How do I change from Celsius to Fahrenheit?

To change between °C to °F, follow these steps:

1. Press the ON/OFF button and turn off the fireplace.
2. Simultaneously, press both the mode button and the thermostat button.
3. Look at the LCD display to verify that your desired indicator (°F or °C) is being displayed.
   If not, repeat Step 2.
5.10.9 When do I change batteries in my remote?
When the remote-control batteries are low, a battery icon will appear on the LCD display of the remote control before all battery power is lost. When the batteries are replaced, this icon will disappear.

5.10.10 How do I set the child-lock mode?
To prevent unsupervised children from operating the fireplace, a child-lock function is provided with this remote-control system.
To activate the child-lock function: Simultaneously press the “MODE button” and the “UP button”.
To deactivate the child-lock function: Simultaneously press the “MODE button” and the “UP button”.
During the child-lock mode, none of the remote-control buttons will function. You must deactivate the child-lock function before you can use the remote control.

5.10.11 Why won’t my fireplace turn on?
If your remote control is working, but your fireplace won’t turn on, your fireplace may be in “lockout” mode.
How to reset a lockout:
1. Turn off remote.
2. Turn on remote and wait two seconds.
3. Turn off remote and wait two seconds.
4. Turn on remote and wait two seconds.
5. Turn off remote.
This should clear the lockout mode. Turn on the remote and start the fireplace.
Ensure the master switch is in the run/on position.
After completing these steps, contact your Mendota dealer if fireplace won’t turn on.

5.10.12 What happens when I first light my fireplace?
When you first light your fireplace, the initial curing phase is initiated. During the initial curing phase, a small amount of smoke and odor will be emitted. This is normal. To complete the curing process, run your fireplace, on high fire, for two hours with the fans on level 3. Open doors and windows to dissipate any odor. Turn your fireplace off. After it has cooled, run it again, on high fire, with the blowers off until no smoking or odor remains. Refer to Chapter 3.1.1 Mendota Fireplace Curing Instructions for more information.
6 MAINTENANCE INFORMATION

6.1 REQUIRED PERIODIC INSPECTIONS

1. Check to verify that the vent system and power vent termination are open and free of blockage.
2. Have qualified service person check the operation of the pilot light. Pilot light must light within the first five to eight seconds of ignitor sparks initiation. If it takes more ten seconds to ignite the pilot flame, check pilot spark rod position and ignitor wires for pinched areas or damaged areas.
3. Pilot rectification time must be checked. Pilot flame should rectify the ignition system within five seconds of pilot flame ignition and sparking at pilot must stop with five seconds. If pilot flame ignites but sparking continues at pilot hood after five seconds, it indicates that pilot flame sensor is dirty. Clean pilot flame sensor using emery cloth and retry. If problem persists, check flame sensor lead wire for damage or grounding problems and correct.
4. Periodic visual check of pilot flames is required. Pilot Flame must overlap Flame Sensor and burner ignition ports always. Especially for LPG applications, always verify visible pilot flame length is at least 1" long, minimum.
5. Cycle the burners to make certain burner ignition is prompt and flame propagation along burner length is quick and smooth. If flame propagation is delayed, remove obstructing debris, vacuum burner ports and retry.
6. Periodic visual check burner flames pattern is required.

6.2 CLEANING VIEWING GLASS

WARNING: Do not clean when glass is hot.

The viewing glass should be cleaned periodically. Exterior glass surface may be cleaned with cleaner as desired. To clean Interior glass surface, remove glass frame assembly. See 4.7 To Remove Door. Use Kel Kem "polish plus" (part # 65-06-00455) or comparable product to clean glass interior surface. Do not use oven cleaner or abrasive cleaners to clean glass.

6.3 REQUIRED ANNUAL MAINTENANCE

In addition to the “Required Periodic Inspections”, the following procedures must be performed each year by a qualified installer, service agency or the gas supplier. Any adjustments to burner, pilot or logs must be done by a qualified installer, service agency, or the gas supplier.

Clean all lint and dust build-up around the control and blowers. Inspect the condition of any wiring. Clean flame sensor rod/hook using emery cloth. Vacuum all burner ports and pilot assembly.

Remove logs & coals and clean away any foreign matter (lint, Carbon, etc.) on the burner and logs. Be sure the burner ports are "open". Clean the pilot and under side of the logs for any Carbon deposits.

NOTE: Logs should be visually checked for Carbon "build-up". If heavy carbon deposits are visible on logs, unit should be turned off and a qualified installer, service agency, or the gas supplier should be contacted. Be sure logs are re-installed per instructions.

Check glass gasket seal. Visually inspect glass gasket, especially at the corners of the glass piece. Glass gasket is installed as a 4-piece assembly. Check joints between the gasket pieces at the corners. They should butt against each other to create a seal. Gaps between gasket pieces can cause exhaust leaks and lead to acrid smell concerns.
6.4 OVER FIRING OR UNDER FIRING OF BURNER

NEVER "over fire" or "under-fire" units by increasing or decreasing the main orifice sizes or by adjusting gas pressure to increase BTUH above nameplate specifications.

Over firing can cause permanent damage to firebox and deterioration of parts and void the warranty.

Under-firing can potentially cause delayed ignition and lead to property loss and person injury and will void the warranty.

If you are using a “backyard” Natural Gas well as the gas source, you must submit formal gas analysis data sheets to Mendota Fireplaces for review and calculation of proper main burner orifice sizes prior to first firing. It is known that unpurified Natural Gas from “backyard” wells can contain high energy levels causing over firing. Further, unpurified gas can contain high levels of Sulphur and other compounds which can damage the burner materials and the ceramic glass. Use of unpurified gas will void the warranty for this product.

6.5 BURNER FLAME HEIGHTS REFERENCE DIAGRAM

Figure 6-2 Burner Flame Heights: This image provides a visual reference for the burner flames burning at maximum height after the burners have been operating for 30 minutes or longer. This, however, is dependent on the gas type, air shutter opening setting and vent system configuration. Actual flame heights can be slightly higher or lower when compared to this reference image.
6.6 REPLACEMENT PARTS INFORMATION

6.6.1 How to Access Components

Before accessing any components in the fireplace always first shut off power and gas to the fireplace. This fireplace has been designed to make accessing the components as easy as possible. Most of the components including the valve and control board can be accessed and replaced without having to remove anything from inside the firebox.

The descriptions below show where the main fireplaces components are located and how to access them for service. The descriptions show how to access the components after the fireplace has been installed. All components are also accessible from the outside of the unit before the fireplace is installed.

**Pilot:** The pilot is in the center of the firebox at the rear. If the pilot must be replaced. Remove the floor plate, burner and right-side access grill from the fireplace. Remove the heat shield that is covering the valve under the access panel, this will give access to the valve and control board so that the pilot can be disconnected. The pilot can then be disconnected from the pilot bracket and removed from the fireplace.

**Burner:** To remove the burner first remove the 4 screws holding the feet of the burner to the firebox. Then rotate the burner so that the feet clear the air box. Then slide the burner to the left to remove the burner tube from the shutter box. Detailed instructions for removing the burner can be found in the converting to LPG section of this manual.

**Gas Valve:** The main gas valve is located on the right side of the fireplace. To access the valve, remove the right-side access panel and heat shield from the fireplace. The valve is mounted on a bracket that is Velcroed to the floor. Simply pull up on the bracket to free the valve and pull it out of the fireplace. It is a good idea to first disconnect the wires connected to the valve, so they aren’t damaged when removing the valve. The gas lines will have enough slack to allow you to pull the valve out of the fireplace without disconnecting them first.

**Control Board:** The control board is mounted on the right side of the fireplace. To access the control board, remove the right-side access panel and heat shield from the fireplace. The board is Velcroed to the floor simply pull up on the board to remove it from the fireplace.
**Convection Blowers:** The convection blowers are mounted at the rear of the fireplace. To remove the blowers first remove the floorplate and burner from the firebox. Then unscrew the pilot bracket and air shutter components from the air box. Then unscrew the airbox and lift it out of the fireplace. Next remove the firebox floor access panels. The blowers are located under these panels towards the rear of the fireplace. The blower assemblies are attached to the floor with two nuts. Remove the nuts and lift the blower assemblies out of the fireplace.

**Accent Lights:** The accent lights are mounted in the firebox top. The lens and retaining bracket is held on with 4 nuts.

### 6.6.2 Convection Air Blower System Parts

### 6.6.3 Accent Light Parts
6.6.4 Gas Train Assembly Parts

Figure 6-3 Gas Train Assembly Parts
Glass Frame Parts Replacement Procedure

WARNING: do not use substitute materials. All replacement materials must be certified and obtained through Mendota fireplaces.

TO REPLACE DAMAGED GLASS
1. Bend glass retainer tabs up 90 degrees. Four tabs hold down the glass and gasket assembly.
2. Remove the damaged glass and gasket material. Clean the inner surface of the glass frame.
3. Assemble new gasket on glass edge starting with the bottom left corner. The adhesive on the gasket should contact the glass surface. Use tracer lines in gasket to determine where the glass should sit on the gasket surface.
4. Place glass and gasket assembly in glass frame and carefully bend down glass retainer tabs. Extra glass retainer tabs are provided should any originally used tabs break off.

The glass frame assembly and its individual components are available through Johnson Gas Appliance Company. Contact your dealer for more detailed ordering information.

WARRANTY QUALIFICATION AND SERVICE

The following information verifies proper installation and operation of your Mendota fireplace. All installation and operating instructions must be carefully followed. This Mendota fireplace must be installed and serviced by a qualified installer, service agency, or the gas supplier.

7.1 FINAL INSTALLATION AND HOMEOWNER CHECKLIST

- INSERTS ONLY: The existing woodburning fireplace and its chimney system are structurally sound, professionally cleaned, intact and remain woodburning capable (inserts only).
- INSERTS ONLY: Woodburning chimney interior and chimney top cap are inspected and repaired or replaced if damaged.
- No offensive odor emitting materials exist around appliance such as low temp rated adhesives, plastics or others.
- All surrounding finishing materials are conforming to manual requirements.
- Electrical power supply system conforms to NEC and local electrical codes.
- Gas supply must conform to national and local building codes.
- All gas line joints were checked for leaks using gas leak detector solution or a gas sniffer.
- All internal gas plumbing joints were checked for leaks using gas leak detector solution or a gas sniffer.
- Glass gasket was inspected and verified that it is sealing properly.
- Gas supply line was bled of air and pilot flame was ignited.
- Pilot flame overlaps burner flame propagation ports properly.
- Burners light and flames travel promptly along entire length of burner.
- Logs/media are installed properly per installation instructions.
- Burner(s) air shutter is adjusted properly. Shutter opening set properly per installation manual.
- Burner flames are “stable” and are not “lifting” off burner.
- Inform owner that an initial curing step is required. Read and follow Mendota Fireplace and Insert Curing Instructions (found on unit and in owner’s manual). Smoke will emit during initial curing step.
- Provide owner with contents of owner’s manual packet.
  - Owner’s manuals, remote control transmitter, glass latch tool, backup battery system, etc.
- Train owner how to remove and reinstall decorative front.
- Train owner how to remove and properly reinstall glass door.
- Inform owner about the glass safety screen barrier requirement.
- Train owner on remote control functions.
  - Inform owner about IPI and CPI mode and that CPI shall be used for winter months.
  - How to light the pilot light.
  - How to light the main burners and how to control the flame height.
  - How to turn the fan on and how to control fan speed.
  - How to turn light on and how to control light brightness.
  - How to turn the rear burner on and off.
  - Explain manual mode operation.
  - Explain thermostatic modes operations.
- Train owner about lockout mode and how to reset it.
- Train owner how to use backup battery system and operate appliance during power outage.
- Train owner about master switch location and emergency shutoff function.
- Train owner how to operate manual shutoff gas valve using glass latch tool.
- Inform owner that periodic maintenance of this unit is required per manual.

WARNING: MENDOTA GAS FIREPLACES ARE HEAT PRODUCING APPLIANCES. KEEP CHILDREN AND FURNITURE A SAFE DISTANCE AWAY TO PREVENT PROPERTY DAMAGE, PERSONAL INJURY OR LOSS OF LIFE.

I have trained and informed homeowner of all the requirements listed above.

### WARRANTY POLICY STATEMENT

Mendota Fireplace, a division of Johnson Gas Appliance Company, extends this Limited Lifetime Warranty to the original purchaser of this appliance provided the product remains in the original place of installation. The items covered by this limited warranty and the period of such coverage is set forth in the table below.

Some conditions apply (see below).

The policy is not transferable, amendable or negotiable under any circumstances.

**STD** = Mendota Standard Warranty  
**EXT** = Mendota Extended Warranty With Registration
7.3 CONDITIONS

Warranty protects against defect in manufacture or Mendota factory assembled components only, unless herein specified otherwise.

It remains the full responsibility of the owner to operate this appliance within the guidelines provided in the Installation and Operating Instructions Manual accompanying this appliance. Further, the owner shall bear full responsibility to enforce clearances to combustibles requirements and cautioning others about hot glass surface and hot metal surfaces.

Owner by operating this appliance accepts that this is a heat producing appliance which has glass and steel parts that are hot enough to cause severe burns. Owner accepts that this appliance requires close monitoring of children and vulnerable individuals who are in the vicinity of this appliance when it is in operation. Mendota does not assume or accept any liability claims for burns or other physical or material damages resulting from touching hot glass surface and hot metal surfaces that are part of this appliance or other adjacent object such as hearth pads and mantels that may heat up during operation of this appliance.

Any part(s) found to be defective during the warranty period as outlined above will be repaired or replaced at Mendota’s option through an accredited distributor, dealer or pre-approved and assigned agent provided that the defective part is returned to the distributor, dealer or agent for inspection if requested by Mendota. Alternatively, Mendota may at its own discretion fully discharge all of its obligations under the warranty by refunding the verified purchase price of the product to the original purchaser. The purchase price must be confirmed by the original Bill of Sale.

The authorized selling dealer, or an alternative authorized Mendota dealer if pre-approved by Mendota, is responsible for all in-field diagnosis and service work related to all warranty claims. Mendota is not responsible for results or costs of workmanship of unauthorized Mendota dealers or agents in the negligence of their service work.

At all times Mendota reserves the right to inspect reported complaints on location in the field claimed to be defective prior to processing or authorizing of any claim. Failure to allow this upon request will void the warranty.

All warranty claims must be submitted by the dealer servicing the claim, including a copy of the Bill of Sale (proof of purchase by you). All claims must be complete and provide full details as requested by Mendota to receive consideration for evaluation. Incomplete claims may be rejected.

Unit must be installed according to all manufacturers’ instructions as per the manual by a Mendota authorized dealer, an authorized dealer technician or an authorized service person only.

All Local and National required codes must be met.

The installer is responsible to ensure the unit is operating as designed at the time of installation.

The original purchaser is responsible for annual maintenance of the unit, as outlined in the owner’s manual. As outlined below, the warranty may be voided due to problems caused by lack of maintenance.

Repair/replacement parts purchased by the consumer from Mendota after the original coverage has expired on the unit will carry a 90-day warranty, valid with a receipt only. Any item shown to be defective will be repaired or replaced at our discretion. No labor coverage is included with these parts.

7.3.1 Exclusions

1. This Limited Lifetime Warranty does not extend to paint, rust or corrosion of any kind due to a lack of maintenance or improper venting, combustion air provision, corrosive chemicals (i.e. chlorine, salt, air, etc.), door or glass gasketing.

2. Discoloration and some minor warping are normal, not a defect and therefore not covered under this warranty. The installer must insure the unit is burning as per the rating tag at the time of installation. Over-firing (operation above the listed BTU rating of this unit can cause serious damage and will nullify this warranty.

3. Mendota will not cover the cost of the removal or re-installation of hearths, facing, mantels or other components.

4. This warranty does not cover dealer travel costs for diagnostic or service work. All labor rates paid to authorized dealers are subsidized, pre-determined rates. Dealers may charge homeowner for travel and additional time beyond their subsidy.

5. Damages to plated surfaces caused by fingerprints, scratches, melted item or other external sources left on plated surfaces from the use of cleaners other than denatured alcohol is not covered by this warranty.
6. Mendota is free of liability for any damages caused by the appliance, as well as inconvenience expenses and materials. Incidental or consequential damages are not covered by this warranty.

7. Exclusions to this warranty include: injury, loss of use, damage, failure to function due to accident, negligence, misuse, improper installation, alteration of the manufacturer’s setting of components, lack of proper and regular maintenance, damage incurred while the appliance is in transit, or by act of God.

8. Malfunction, damage or performance based issues of any and all components as a result of environmental conditions, location, chemical damages, downdrafts, installation error, installation by an unqualified installer, incorrect chimney components (including but not limited to cap size or type), operator error, abuse, misuse, use of improper fuels, lack of regular maintenance and upkeep, acts of God, weather related problems from hurricanes, tornados, earthquakes, floods, lightning strikes/bolts or acts of terrorism or war, which result in malfunction of the appliance are not covered under the terms of this Limited Lifetime Warranty.

9. Mendota has no obligation to enhance or modify any unit once manufactured (i.e. as products evolve, field modifications or upgrades will not be performed on existing appliances).

10. Any unit showing signs of neglect or misuse will not be covered under the terms of this warranty policy and may void this warranty. This includes units with rusted or corroded fireboxes which have not been reported as rusted or corroded within three (3) months of installation/purchase.

11. Units which show evidence of being operated while damaged, or with problems known to the purchaser and causing further damages will void this warranty.

12. Units where the serial no. has been altered, deleted, removed or made illegible will void this warranty.

13. Noises due to minor movement, expansion and contraction of the steel is normal and is not covered under the terms of this warranty.

14. Freight damages for products or parts are not covered under the terms of the warranty.

15. Products made or provided by other manufacturers and used in conjunction with the Mendota appliance without prior authorization from Mendota may void this warranty.

7.3.2 Limitations of Liability

The original purchaser’s exclusive remedy under this warranty, and Mendota’s sole obligation under this warranty, express or implied, in contract or in tort, shall be limited to replacement, repair, or refund, as outlined above. In no event will Mendota be liable under this warranty for any incidental or consequential commercial damages or damages to property. To the extent permitted by applicable law, Mendota makes no express warranties other than the warranty specified herein. The duration of any implied warranty is limited to duration of the expressed warranty specified above. If implied warranties cannot be disclaimed, then such warranties are limited in duration to the duration of this warranty.

Some U.S. states do not allow limitations on how long an implied warranty lasts or allow exclusion or limitation of incidental or consequential damages, so the above limitations or exclusions may not apply to you.

Customers located outside the U.S. should consult their local, provincial or national legal codes for additional terms which may be applicable to this warranty.

7.3.3 How to Obtain Warranty Service

1. If you discover a problem that you believe to be covered by the warranty, you must report to your Mendota Dealer within 30 days, with proof of purchase, purchase date, model name and serial number.

2. Customers should contact the authorized selling dealer to obtain warranty service. In the event the authorized selling dealer is unable to provide warranty service, please contact Mendota by mail at the address listed below. Please include a brief description of the problem and your address, email and telephone contact information. A representative will contact you to make arrangements for an inspection and/or warranty service.

Warrantor:
Johnson Gas Appliance Company
Mendota Fireplace Division
520 E Avenue NW, Cedar Rapids, IA 52405, USA

85-03-01118 ML72 Page 85
7.3.4 Owner Registration

After installation, Mendota fireplace owners must register with Mendota to qualify for the Lifetime Limited Warranty within 30 days. Product registration will activate your Lifetime Limited Warranty.

Owners should complete the forms available at:

mendotahearth.com/warranty

Note: Your Mendota dealer can assist with warranty applications and information.
MENDOTA EXTENDED WARRANTY FORM

As a part of Mendota’s on-going program of customer satisfaction, this form verifies proper installation and operation. It is important as a reference for future service. It ensures long life and trouble-free operation of Mendota fireplaces and stoves and qualifies the owner for Mendota’s limited lifetime parts warranty on the firebox, heat exchanger, burners and glass. Mendota will extend our standard 2-year parts warranty an extra year when you complete the certified installation and registration process.

WARNING: MENDOTA GAS FIREPLACES ARE HEAT PRODUCING APPLIANCES. KEEP CHILDREN AND FURNITURE A SAFE DISTANCE AWAY TO PREVENT PROPERTY DAMAGE, PERSONAL INJURY OR LOSS OF LIFE.

All information below is required to qualify for the Mendota Extended Warranty.
